organismal biologists geneticists ecologists behavioural ecologists morphologists mathematicians theoreticians and
experimentalists in honour of Professor Eviatar Eibi Nevo on the occasion of his seventieth birthday The contributors are only
a small subset of Eibi s many friends collaborators and students not that one can distinguish these categories among Eibi s
colleagues His widespread influence and activity both in Israel and more generally as a leading evolutionary biologist is
indicated by his many co authors on books and papers and by his many students integrated in teaching and research This
volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It
represents analyses experiments observations reviews discussions and forecasts of evolutionary theory comprising both novel
methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing
model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in
molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed
include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces
structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging
generalization is the nonrandomness of genome structure highlighting the importance of natural selection as a major
organizing evolutionary force not only at the phenotypic level but most importantly at the interlinked genotypic molecular
level The integration between the molecular and organismal levels unifies life which is subjected to the mechanism of natural
selection as a major orienting evolutionary force *Groundwater*,1988 *Biology Teaching Methods* Doris F. Falk,1980
