GENERAL

This Manual is a guide to help assist with the operation of this ductless system. It does not contain the service procedures that have to be performed by a qualified HVAC service technician.

IMPORTANT

- Make sure you read this manual before you start operating your new ductless system.
- After reading this manual, if you still need more information that may not have been covered in this manual, please contact your HVAC contractor.
- To ensure comfort, make sure that temperature selection has been properly set at the remote control. To ensure efficient operation, do not block air intake or outlet at either the indoor or outdoor unit. Also, do not stand nor put items on top of outdoor and indoor units.
- If any issues with your system were to arise, please contact your HVAC contractor.
- Make sure your windows and doors are shut when operating your ductless system.

NOTICE

The refrigerant inside your ductless product uses PVE oil (Polyvinyl Ether Oil) that readily absorbs moisture from the atmosphere. To limit this "hygroscopic" action, the system should remain sealed whenever possible. If a system has been open to the atmosphere for more than 4 hours, the compressor oil must be replaced. Do not break a vacuum with air and always change the driers when opening the system for component replacement. For specific handling concerns with PVE oil, contact your HVAC contractor. Failure to follow these recommendations could result in equipment damage.

Readers' Guide to Periodical Literature ,1915 **The Engineer** ,1871 *English Mechanic and Mirror of Science* ,1892 **Fish Processing Technology** George M. Hall,2012-12-06 As with the first edition this book includes chapters on established fish processes and new processes and allied issues The first five chapters cover fish biochemistry affecting processing curing surimi and fish mince chilling and freezing and canning These established processes can still show innovations and improved theory although their mature status precludes major leaps in knowledge and technology The four chapters concerned with new areas relevant to fish processing are directed at the increasing globalisation of the fish processing industry and the demands from legislation and the consumer for better quality safer products One chapter reviews the methods available to identify fish species in raw and processed products The increased demand for fish products and the reduced catch of commercially important species has lead to adulteration or substitution of these species with cheaper species The ability to detect these practices has been based on some elegant analytical techniques in electrophoresis
