Ipcc Fourth Assessment Report Ar4:

The Lomborg Deception Howard Friel, 2010-03-16 In this major assessment of leading climate change skeptic Bjørn Lomborg Howard Friel meticulously deconstructs the Danish statistician's claim that global warming is no catastrophe by exposing the systematic misrepresentations and partial accounting that are at the core of climate skepticism His detailed analysis serves not only as a guide to reading the global warming skeptics but also as a model for assessing the state of climate science With attention to the complexities of climate related phenomena across a range of areas from Arctic sea ice to the Antarctic ice sheet The Lomborg Deception also offers readers an enlightening review of some of today's most urgent climate concerns Friel's book is the first to respond directly to Lomborg's controversial research as published in The Skeptical Environmentalist 2001 and Cool It The Skeptical Environmentalist's Guide to Global Warming 2007 His close reading of Lomborg's textual claims and supporting footnotes reveals a lengthy list of findings that will rock climate skeptics and their allies in the government and news media demonstrating that the published peer reviewed climate science as assessed mainly by the U N's Intergovernmental Panel on Climate Change has had it mostly right even if somewhat conservatively right all along Friel's able defense of Al Gore's An Inconvenient Truth against Lomborg's repeated attacks is by itself worth an attentive reading

Reaching an International Agreement on Climate Change Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-07-08 The agreement of the Bali roadmap charted a course for negotiations on a successor agreement to the Kyoto Protocol when it expires in 2012 But there remain uncertainties about the pace and eventual outcome of the negotiations A post 2012 agreement will only be a success if it is guided by the science which warns that developed countries must reduce emissions by 25-40 per cent by 2020 and 80-95 per cent by 2050 These figures only translate to a 50-50 chance of avoiding dangerous climate change and the international community should aspire to even greater reductions Most developing countries are not required to reduce emissions but will need to commit to certain actions that will limit the growth of and eventually stabilise their emissions The Committee believes that the targets for developed countries and commitment to actions by developing countries are the minimum that the UK and EU should accept in the negotiations Diplomacy will be key in helping to reach agreement on the effort required The Government will have to work closely with developing countries to explore the actions that they might be willing to commit to The post 2012 agreement can be more flexible and creative than its predecessor in responding to the different needs of different countries It is clear that substantial developed country financing will be required in order to shift developing countries onto a low carbon path and also to encourage them to agree to mitigation actions
