the environment the task takes place within and the effect of the imposed constraints on the way work can be conducted It provides guidance through the process of answering the questions of why the system exists what activities can be conducted within the domain as well as how these activities can be achieved and who can perform them The first part of the book contains a comprehensive description of CWA introducing it to the uninitiated It then presents a number of applications in complex military domains to explore and develop the benefits of CWA Unlike much of the previous literature particular attention is placed on exploring the CWA framework in its entirety This holistic approach focuses on the system environment the activity that takes place within it the strategies used to conduct this activity the way in which the constituent parts of the system both human and non human interact and the behaviour required Each stage of this analysis identifies the constraints governing the system it is contended that through this holistic understanding of constraints recommendations can be made for the design of system interaction increasing the ability of users to cope with unanticipated unexpected situations This book discusses the applicability of the approach in system analysis development and evaluation It provides process to what was previously a loosely defined framework
