*Mechanisms in Radiobiology* Maurice Errera, Arne Forssberg, 2013-09-03 *Mechanisms in Radiobiology Volume II Multicellular Organisms* presents the development of radiobiology which has run parallel with the advancement of biology. This book discusses the fundamental aspects of radiobiology in connection with the therapeutic use of X rays in medicine. Organized into five chapters, this book begins with an overview of radiation effects on embryonic and adult organisms, particularly in mammals. This text then discusses the immunological processes in irradiated organisms. Other chapters consider the mechanisms of action of protective and sensitizing agents and examine the primary or secondary effects of the irradiation on the various organs. This book discusses as well the experimental possibilities of improving the recovery of irradiated mammals. The final chapter deals with the reactions of living organisms after a damaging dose of ionizing radiation, which is determined by a variety of biological and physical factors. This book is a valuable resource for radiobiologists, pathologists, scientists, physicists, clinicians, and research workers.
