

Remember

1. A **chord** is a segment whose endpoints are points on a circle.
A **secant** is a line that intersects a circle at two points.
A **tangent** is a line that intersects a circle at exactly one point.

2. If two chords intersect inside a circle, the measure of each angle is equal to half the measure of the sum of the intercepted arcs.

$$m\angle 1 = \frac{1}{2} (m\widehat{AB} + m\widehat{CD}) = \frac{1}{2} (50^\circ + 40^\circ) = \frac{1}{2} (90^\circ) = 45^\circ$$

3. If two secants, a secant and a tangent, or two tangents intersect outside a circle, the measure of the angle formed is equal to half the measure of the difference of the intercepted arcs.

$$m\angle 2 = \frac{1}{2} (m\widehat{EG} - m\widehat{FH})$$

$$m\angle 3 = \frac{1}{2} (m\widehat{JK} - m\widehat{JL})$$

$$m\angle 4 = \frac{1}{2} (m\widehat{RTS} - m\widehat{RS})$$

Use the diagrams above and the information given to find the missing measures. Then use the decoder to answer this riddle: *Why did the polite man spend the day at the beach?*

Pollination Mechanisms, Reproduction and Plant Breeding R. Frankel, Esra Galun, 2012-12-06. view than its own proper males should fecundate each blossom. ANDREW KNIGHT Philosophical Transactions 1799. Pollination mechanisms and reproduction have a decisive bearing upon rational procedures in plant breeding and crop production. This book intends to furnish under one cover an integrated botanical, genetical, and breeding methodological treatment of the reproductive biology of spermatophytes, mainly angiosperms. It is based on an advanced topical course in plant breeding taught at the Hebrew University of Jerusalem. We have tried to present a coverage which is concise but as comprehensive as possible of the pollination mechanism and modes of reproduction of higher plants, and to illustrate topics whenever practicable by examples from cultivated plants. Nevertheless, some relevant publications may have escaped our attention or may not be mentioned because of various limitations. The book is organized into three parts. The first part starts with an evaluation of the significance of the different pollination mechanisms for plant breeding and crop production, describes modes of reproduction in higher plants, and

discusses ecology and dynamics of pollination The second part is devoted to crops propagated by self pollination and describes specific breeding procedures for such crops The third part details sexual reproduction in higher plants and handles three mechanisms involved in the prevention of self pollination and their utilization in plant breeding sex expression incompatibility and male sterility
