### Introduction

Congratulations on the purchase of your vehicle security system. In learning to operate your security system, please become familiar with the following three principal components: the Transmitter, the LED Status Indicator light, and the Valet/Override Switch.

**The Transmitter:** Each security system comes with two pre-learned transmitters, but can learn up to 4 different transmitters. Every transmitter has its own unique, invisible code, which changes with each use. Thus, your transmitter cannot be duplicated. The transmitter has two buttons: one large button and a smaller button. Refer to pages 4-8 for detailed transmitter operating instructions.

**The Valet/Override Switch:** This switch can be used to turn "Off" the alarm portion of the system, including the programmable Automatic Last Door Arming and Automatic Rearming features, by placing the system into "Valet Mode". The Valet/Override Switch can also be used in conjunction with the vehicle's ignition key to perform an "Emergency Override" of the system should the transmitter be lost. Both of these are explained on pages 8-10.

**The LED Indicator Light:** The LED indicates the status of the alarm and serves as a visual deterrent to break-ins and theft. Refer to pages 11-12.

Page 3

- Upon Disarm:**
- The siren will chirp twice. (4 chirps if alarm has activated & reset)
  - The parking lights will flash twice. (4 times if alarm has activated)
  - The doors will unlock. (if an optional interface is connected)
  - The starter interrupt will disengage.
  - The LED Status Indicator will turn "Off", or begin flashing rapidly if the Automatic Rearming feature is programmed on. (page 16)

**Note:** If a protected zone is open when actively arming using the transmitter, the system will still arm, but bypass the open zone until the zone is secured.

#### To Passively Arm the System: Open & Close a Door.

Automatic "Last Door Arming" is a programmable feature which allows the alarm to arm itself and, if desired, lock the doors. If "On", this convenient feature offers a high level of security since the user does not need to actively arm the system each time the vehicle is exited. Any time a door is opened and closed.

- 1) The LED Status Indicator will begin flashing rapidly to confirm that the Last Door Arming countdown has begun.
- 2) 30 seconds later the system will arm, chirping the siren once, and locking the doors, if programmed to do so and if an optional interface is installed. The LED Status Indicator will begin flashing slowly to confirm that the system is armed.

Page 5

### Remote Panic Operation

Should it be needed in a threatening situation, the system can be activated remotely by using the transmitter.

**To Activate Panic:** Press & Hold the Large Button for 3 Seconds.

**To Deactivate Panic:** Press & Release the Large Button.

### Arming & Disarming the System

The system may be "Armed" by one of two methods. The first method involves the use of a remote transmitter to "Actively" arm the system, provided the ignition switch is "off" and the system is not in Valet Mode. The second method is a programmable feature called "Last Door Arming" in which the alarm will "Passively" or "self" arm. The system simply reverses its armed/disarmed status when the transmitter is used. If it is disarmed when the transmitter signal is received, it arms; if it is armed when the signal is received, it will disarm.

**To Actively Arm/Disarm the System:** Press & Release the Large Transmitter Button.

- Upon Arming:**
- The siren will chirp one time.
  - The parking lights will flash once.
  - The doors will lock. (if an optional interface is connected)
  - The starter interrupt will engage.
  - The LED Status Indicator will begin to flash slowly.

Page 4

**Note:** The system can not Last Door Arm if a protected zone is open. If a vehicle door is opened during the arming countdown, the countdown will stop and start over again when the door is closed.

**Note:** "Automatic Rearming" (page 16) is a separate programmable operation similar to Last Door Arming, and should not be confused with it.

#### If the System is Activated:

Regardless of method, once the system is in a fully armed state it monitors all protected zones, and if an intrusion attempt is detected it will activate, or "trigger". An activation consists of the following:

- 1) The electronic siren, or optionally the vehicle's horn, will start sounding.
- 2) The exterior parking lights will flash on and off repeatedly.

An activation has a 30 (or 60) second duration unless the system is disarmed using the transmitter or the Valet/Override switch. If all protected zones are secure at the end of the activation, the system will stop and rearm itself to detect further entry attempts. If a protected zone is still open at the end of the activation cycle, the system will continue to reactivate for up to 3 additional cycles. After the fourth cycle the system will again rearm, but bypass the violated zone until it is restored.

### The Auxiliary Channel

The Auxiliary Channel may be used to operate an optional function. Possibilities include trunk release, remote car starting, or a window roll-up interface. Please see your Omega dealer for details on available options.

**To Activate the Auxiliary Channel:** Press & Hold the Small Button for 3 Seconds.
