Paegelow,Jean François Mas,2022-06-16 This open access book represents a comprehensive review of available land use cover data and techniques to validate and analyze this type of spatial information The book provides the basic theory needed to understand the progress of LUCC mapping modeling validation practice It makes accessible to any interested user most of the research community s methods and techniques to validate LUC maps and models Besides this book is enriched with practical exercises to be applied with QGIS The book includes a description of relevant global and supra national LUC datasets currently available Finally the book provides the user with all the information required to manage and download these datasets   Introduction to Bayesian Data Analysis for Cognitive Science Bruno Nicenboim,Daniel J. Schad,Shravan Vasishth,2025-08-21 This book introduces Bayesian data analysis and Bayesian cognitive modeling to students and researchers in cognitive science e g linguistics psycholinguistics psychology computer science with a particular focus on modeling data from planned experiments The book relies on the probabilistic programming language Stan and the R package brms which is a front end to Stan The book only assumes that the reader is familiar with the statistical programming language R and has basic high school exposure to pre calculus mathematics some of the important mathematical constructs needed for the book are introduced in the first chapter Through this book the reader will be able to develop a practical ability to apply Bayesian modeling within their own field The book begins with an informal introduction to foundational topics such as probability theory and univariate and bi multivariate discrete and continuous random variables Then the application of Bayes rule for statistical inference is introduced with several simple analytical examples that require no computing software the main insight here is that the posterior distribution of a parameter is a compromise between the prior and the likelihood functions The book then gradually builds up the regression framework using the brms package in R ultimately leading to hierarchical regression modeling aka the linear mixed model Along the way there is detailed discussion about the topic of prior selection and developing a well defined workflow Later chapters introduce the Stan programming language and cover advanced topics using practical examples contrast coding model comparison using Bayes factors and cross validation hierarchical models and reparameterization defining custom distributions measurement error models and meta analysis and finally some examples of cognitive models multinomial processing trees finite mixture models and accumulator models Additional chapters appendices and exercises are provided as online materials and can be accessed here https github com bnicenboim bayescogsci   Energy Forecasting and Control Methods for Energy Storage Systems in Distribution Networks William Holderbaum,Feras Alasali,Ayush Sinha,2023-01-07 This book describes the stochastic and predictive control modelling of electrical systems that can meet the challenge of forecasting energy requirements under volatile conditions The global electrical grid is expected to face significant energy and environmental challenges such as greenhouse emissions and rising energy consumption due to the electrification of heating and transport Today the distribution network includes energy sources with volatile demand behaviour and intermittent renewable generation This has made it increasingly important to

understand low voltage demand behaviour and requirements for optimal energy management systems to increase energy savings reduce peak loads and reduce gas emissions Electrical load forecasting is a key tool for understanding and anticipating the highly stochastic behaviour of electricity demand and for developing optimal energy management systems Load forecasts especially of the probabilistic variety can support more informed planning and management decisions which will be essential for future low carbon distribution networks For storage devices forecasts can optimise the appropriate state of control for the battery There are limited books on load forecasts for low voltage distribution networks and even fewer demonstrations of how such forecasts can be integrated into the control of storage This book presents material in load forecasting control algorithms and energy saving and provides practical guidance for practitioners using two real life examples residential networks and cranes at a port terminal   *R in Action* Robert I.
