

Removal of Palming Sideplate

To remove the palming sideplate, loosen the thumb screw on the gear sidecover counter-clockwise and twist the palming side-cover in a downward direction.

Reel Care and Lubrication

Your new Carbonlite reel is designed to provide years of dependable service. But like any other precision machine, periodic cleaning and maintenance is required for consistent peak performance.

Reels made today require both a lightweight oil and grease. Oil and grease should be used sparingly; too much can have a negative impact on reel performance. There are lightweight oils and greases made specifically for fishing reels, such as Bass Pro Shops® XPS® oil and grease that can be found at BassPro.com.

As a rule of thumb, oils should be used to lubricate any moving part on the reel, e.g. ball bearings, bushings, handle pins, bail springs, etc. Grease should be used on lubricate the main drive gear and pinion gear.

We do not recommend using any multipurpose oils. Many of these oils have properties that will attract dirt and cause to the internal parts. This may cause excessive wear and reduce the life of the reel.

After each trip, the reel should be checked for dirt or sand. If it has been exposed to saltwater, the spool should be removed and the entire reel rinsed in freshwater. Dry with a soft cloth and lubricate the reel as described above.

Tournament Performance

Congratulations - You have just purchased one of the finest fishing reels available today. This cutting-edge reel combines the finest in advanced materials with high performance engineering. The result is an extremely lightweight reel with a power feel drive that will keep you on the water longer.

It starts with a 1-piece anodized aluminum frame that resists torque and keeps the gears in perfect alignment. Each sideplate is milled from a carbon material composite that provides the strength of aluminum with the weight of magnesium. Many of the internal parts, including the spool, are made from aluminum alloy. These parts work with nothing less and nothing more so you don't need to worry about durability. The 30-bearing system provides smooth casting and retrieval and the Powerlock™ instant anti-reverse ensures that your backlashes are solid. Our patented Dual Braking System allows the user to make adjustments to the spool's rotation without removing the sideplate. Lastly, we're using a custom fiber handle with incredible strength along with lightweight EVA knobs to make the handling of this reel more comfortable.

Features and Operations Instructions

1 pc. Aluminum frame and spool

The 1 pc. aluminum frame provides support to the gear teeth. It keeps torque and keeps the gears in perfect alignment. The spool is made from a aluminum alloy for reduced weight and increased casting distance. Both these parts have been anodized to provide corrosion resistance.

Carbon Milled Sideplates

Both sideplates are milled with a carbon composite material that has the strength of aluminum but the weight of magnesium.

Dual Braking System™

Our patented Dual Braking System combines a centrifugal and magnetic braking system to help maximize backlashes. Both of these systems are externally adjustable for easy use. By rotating the outer dial on the palming sidecover, you can increase or decrease the amount of magnetic force (0-16) that is applied to the spool.

The inner dial controls the number of coils shown that the centrifugal system uses to slow the spool's rotation. When the centrifugal dial is set on "0-8", there is no centrifugal force applied to the spool. You can reach the centrifugal force by rotating the inner dial to 1, 2, or 4 to allow 2, 4, or 8 coils shown to create friction against the spool's brake ring.

We suggest you start with the dial set at 2 when you first use your Johnny Morris® Carbonlite™ reel. As you get more comfortable with the reel, you can adjust the amount of centrifugal force to adapt to prevailing conditions.

Powerlock™ Instant Anti-Reverse

The Johnny Morris® Carbonlite™ reel is equipped with a Powerlock™ instant anti-reverse system. This is a special type of bearing that allows the handle to turn in only one direction. This stimulates any backlash as the handle sets in its position during stop and go retrieves.

Cast Control Knob

The cast control knob is located on the gear sidecover just under the star drag. Its purpose is to apply continuous friction to the end of the spool shaft waiting for the Dual Braking System to maintain the correct spool speed to prevent backlashes.

To use the cast control, be on your line and reel it up to the tip of your rod. Tighten the cast control knob until it feels snug. Push the stop button. Your line should now move. Hold the rod at the 2 o'clock position and slowly turn the cast control knob counter clockwise until the line starts to fall. Let the line hit the ground and work the spool. The spool should not spin more than one revolution after the line has hit the ground. If it spins more than 1 revolution, tighten the cast control knob and repeat the procedure. If the spool does not spin after the line hits the ground, the cast control is set too tight. Loosen the knob and repeat the procedure.
