EXERCISE 1: CELL DIVISION

1. Perform internet research, what is a whitefish blastula?
The blastula is an early embryonic stage in the development of animals. Cells are rapidly dividing at this time so it is a good medium to observe the cell cycle in animals.
2. Perform internet research, why do biologists often use whitefish blastula slides to visualize cell division?
The whitefish embryo is a good place to look at mitosis because these cells are rapidly dividing as the fish embryo is growing.
3. Provide a screenshot of the focused whitefish cell in interphase as it appears underneath the compound microscope under high power (40X, 400X total magnification) and insert here:

Schuhmacher, 1987 Lessons from the Lobster Charlotte Nassim, 2018-06-26 How forty years of research on thirty neurons in the stomach of a lobster has yielded valuable insights for the study of the human brain. Neuroscientist Eve Marder has spent forty years studying thirty neurons on the stomach of a lobster. Her focus on this tiny network of cells has yielded valuable insights into the much more complex workings of the human brain. She has become a leading voice in neuroscience. In *Lessons from the Lobster*, Charlotte Nassim describes Marder's work and its significance accessibly and engagingly, tracing the evolution of a supremely gifted scientist's ideas. From the lobster's digestion to human thought is a very big leap indeed. Our brains selectively recruit networks from about ninety billion available neurons; the connections are extremely complex. Nevertheless, as Nassim explains, Marder's study of a microscopic knot of stomatogastric neurons in lobsters and crabs, a small network with a countable number of neurons, has laid vital foundations for current brain research projects. Marder's approach is as intuitive as it is analytic but always firmly anchored to data. Every scrap of information is a pointer for Marder; her discoveries depend on her own creative thinking as much as her laboratory's findings. Nassim describes

Marder's important findings on neuromodulation, the secrets of neuronal networks and homeostasis. Her recognition of the importance of animal-to-animal variability has influenced research methods everywhere. Marder has run her laboratory at Brandeis University since 1978. She was President of the Society for Neuroscience in 2008 and she is the recipient of numerous awards including the 2016 Kavli Award in Neuroscience and the 2013 Gruber Prize in Neuroscience Research that reaches the headlines often depends on technical fireworks and especially on spectacular images. Marder's work seldom fits that pattern but this book demonstrates that a brilliant scientist working carefully and thoughtfully can produce groundbreaking results.

Kardong, 2005 Written for a general college audience this book offers an introduction to the principles and significance of Darwinian evolution. It differs from most other textbooks on evolution in three fundamental ways: first it is intended for students taking evolution early in their studies; second it examines the intellectual significance of Darwinian evolution; and third the text departs from the standard treatment of evolution in other textbooks wherein the arguments are reductionist, molecular, and overwhelmingly genetic in emphasis. Ken Kardong also author of *Vertebrates Comparative Anatomy Function Evolution* is known for his accessible writing style. His almost conversational approach to this topic puts the reader at ease while learning evolutionary concepts. The result is an inviting book that will be read.
