Rheology and Fourier-Transform Rheology on Water-Based Systems Christopher Klein, 2008 The influence of shear fields on water based systems was investigated within this thesis The non linear rheological behaviour of spherical and rod like particles was examined with Fourier Transform rheology under LAOS conditions As a model system for spherical particles two different kinds of polystyrene disper sions with a solid content higher than 0.3 each were synthesised within this work Due to the differences in polydispersity and Debye length differences were also found in the rheology In the FT rheology both kinds of dispersions showed a similar rise in the intensities of the magnitudes of the odd higher harmonics which were predicted by a model The in some cases additionally appearing second harmonics were not predicted A novel method to analyse the time domain signal was developed that splits the time domain signal up in four characteristic functions Those characteristic functions correspond to rheological phenomena In some cases the intensities of the Fourier components can interfere negatively FD virus particles were used as a rod like model system which already shows a highly non linear behaviour at concentrations below 1 % wt Predictions for the dependence of the higher harmonics from the strain amplitude described the non linear behaviour well at large but no so good at small strain amplitudes Ad ditionally the trends of the rheological behaviour could be described by a theory for rod like particles An existing rheo optical set up was enhanced by reducing the background birefringence by a factor of 20 and by increasing the time resolution by a factor of 24 Additionally a combination of FT rheology and rheo optics was achieved The influence of a constant shear field on the crystallisation process of zinc oxide in the presence of a polymer was examined The crystallites showed a reduction in length by a factor of 2 The directed addition of polymers in combi nation with a defined shear field can be an easy way for a defined change of the form of crystallites

Bishop, 2007 The defacto industry standard for test measurement and automation software solutions LabVIEW 8 delivers the graphical programming capabilities that allow users to design programmable software solutions to problems and lab experiments This version includes new chapter covering LabVIEW MathScript and an upgrade to Chapter 11 Analysis to reflect 150 new and enhanced analysis VIs A new Appendix has been added to include exciting innovative developments with Sound Card API LabVIEW Project and Shared Variables For electrical engineers and those involved in measurement and instrumentation Applied Virtual Instrumentation Roman Baican, Dan S. Neculescu, 2000 This textbook and CD ROM cover the fundamental knowledge and practical solutions required to interface sensors with a PC using the framework of virtual instrumentation The authors focus on the knowledge required by a non specialist to develop a modern monitoring system for example connect sensors to a PC condition their signals when required and store and process the data using digital signal processing subroutines available in commercial

virtual instrumentation packages Learning with LabVIEW 6i Robert H. Bishop, 2001 Defined as The science about the development of an embryo from the fertilization of the ovum to the fetus stage embryology has been a mainstay at universities throughout the world for many years Throughout the last century embryology became overshadowed by experimental based genetics and cell biology transforming the field into developmental biology which replaced embryology in Biology departments in many universities Major contributions in this young century in the fields of molecular biology biochemistry and genomics were integrated with both embryology and developmental biology to provide an understanding of the molecular portrait of a development cell That new integrated approach is known as stem cell biology it is an understanding of the embryology and development together at the molecular level using engineering imaging and cell culture principles and it is at the heart of this seminal book Stem Cells and Regenerative Medicine From Molecular Embryology to Tissue Engineering is completely devoted to the basic developmental cellular and molecular biological aspects of stem cells as well as their clinical applications in tissue engineering and regenerative medicine It focuses on the basic biology of embryonic and cancer cells plus their key involvement in self renewal muscle repair epigenetic processes and therapeutic applications In addition it covers other key relevant topics such as nuclear reprogramming induced pluripotency and stem cell culture techniques using novel biomaterials A thorough introduction to stem cell biology this reference is aimed at graduate students post docs and professors as well as executives and scientists in biotech and pharmaceutical companies
