Topics backed by research, including a chapter devoted to violence, provide students with an overview of today's health issues. *Food Processing Technologies* Amit K. Jaiswal, 2016-08-05 The processing of food generally implies the transformation of the perishable raw food to value-added products. It imparts benefits such as the destruction of surface microflora and inactivation of deleterious enzymes such as peroxidase, leading to a greater shelf life of the food. It also enhances color and texture while maintaining quality of products and makes them edible. However, it also has an inevitable impact on nutritional quality attributes such as increase or decrease in certain vitamins and bioactive metabolites among others. *Food Processing Technologies: Impact on Product Attributes* covers a range of food processing technologies and their effect on various food product attributes such as bioactive compounds, safety, and sensory and nutritional aspects of the food upon processing. There are eight major parts in the book. Part I covers the conventional processing technologies. Parts II, III, IV, and V deal with various novel processing technologies including impingement processing technologies, electro-magnetic processing technologies, physico-mechanical processing technologies, and electro technologies. Part VI introduces chemical processing technologies. Part VII comprises irradiation processing technology, and the final part is focused on biological processing technology, detailing the application of enzymes in food processing. Numerous studies were carried out to find the impact of these processing technologies on various aspects of food and associated health promotion properties. Both positive and negative results were obtained based on nature of foods, processing type, and duration of processing, and this book covers these results in depth. *The United States Catalog*, 1953 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1992 *Foundations in Microbiology 5th.
