Geddes, 2013-06-29 During the last two decades many new techniques and devices have appeared for measuring blood pressure both directly and indirectly At present there is no single source for this information nor is there information on the accuracy and sources of error expected with these technologies It is for this reason that the present book was written Divided into three parts direct measurement indirect noninvasive measurement and history the book is directed toward a broad audience in the medical and biological sciences Physicians nurses medical students and psychologists as well as technical persons in the health care field will find Part One of considerable practical value because it deals with the subject of the accuracy and fidelity of reproduction of blood pressure waveforms that they regularly view on monitors The definitions of systolic mean diastolic and capillary wedge pressures are illustrated and discussed The pressures and waveforms at different sites in the cardiovascular system are described in detail Then the various types of devices for measuring blood pressure are described and thoroughly illustrated The effect of length and internal diameter of a catheter is analyzed to illustrate how fidelity of reproduction is affected Simple tests are described that show the reader how to determine the performance characteristics of a catheter transducer system The characteristics of catheter tip transducers are presented and Part One concludes with a discussion of the rate of change of pressure dp/dt what it means and how such a recording can be calibrated

Labarthe,1981 *Comparing the Accuracy and Comfort of Blood Pressure Measurements from the PropaqEncore Vital Signs Monitor with Those Obtained with Manual Sphygmomanometer and Stethoscope* Rebecca Ann Kaminski,2005

The aim of this study was to compare the accuracy of systolic blood pressure readings from the PropaqEncore Vital Signs Monitor by Protocol Systems Inc model 102EL with systolic blood pressure readings taken with a mercury manometer and stethoscope and to assess the level of self reported pain or discomfort associated with each method A prospective comparative study of 200 subjects using convenience sampling and a repeat measures design was employed with subjects serving as their own controls The results show the PropaqEncore Vital Signs monitor consistently under reported the systolic blood pressure by an average of 6.845 mm Hg particularly in the hypertension 2 category of systolic blood pressures 160 mm Hg where readings varied by an average of 25 mm Hg There was a mean difference in patient pain scores of 1.45 points between the PropaqEncore monitor and the manual method which was not statistically significant In conclusion the PropaqEncore monitor is less accurate than the manual method and has the potential to mislead interpretations of clinical situations PropaqEncore monitor readings should be correlated with manual readings to assure accuracy and validity in order to avoid under diagnosis and under treatment of hypertension **Blood Pressure Screening Manual** North Dakota Hypertension Control Program,North Dakota.
