

Gradient of a Straight Line - Notes

The **gradient m** of a straight line is a measure of its **steepness**.

In order to be able to **compare** gradients, it is most helpful to talk about **vertical change per 'unit' of horizontal change**.

This is where the formula $m = \frac{\text{vertical change}}{\text{horizontal change}}$ comes from.

Negative gradients indicate that the line goes 'down' instead of 'up'.
