EARTH IN WHICH EVERY ROAD AND BUILDING UTILISES NANOTECHNOLOGY TO MAKE CLEAN FUEL FOOD AND FERTILISER JUST FROM WATER SUN AND AIR When agent Jean Moulin investigates the mysterious connections between a murdered woman in Hampstead and assassination attempts on the President of the Whole Earth Council he s led back to the origins of the Global Synthetic Photosynthesis Project in Namibia as well as the forces that wish to destroy it and its visionary eco gendered founder Split by Sun is a witty and poetic novel that explores whether humanity is meant to globally deploy a solar energy technology to progress enforceable rights of ecosystems electronic citizen voting on laws the marriage of corporations to public goods community scale industry the abolition of war and nuclear weapons the facilitation of universal basic income healthcare and education and the replacement of religion with widespread experience of unitive consciousness

Towards a Global Solar Fuels Project - Artificial Photosynthesis and the Transition from Anthropocene to Sustainocene Thomas Alured Faunce,2013 The development of an economy based on practical solar fuels is chiefly predicated on obtaining cheap and abundant hydrogen by using photons to split water then cooling or compressing that gas or on combining such hydrogen with carbon dioxide obtained from abundant industrial sources and eventually the atmosphere to create methanol The construction of devices to make such fuels will be a major step in shifting the biosphere from what has been termed the Anthropocene to the Sustainocene epoch The term Sustainocene refers to a period where governance structures and scientific endeavour coordinate to achieve the social virtues of ecological sustainability and environmental integrity There is a simple public policy message at the core of a vision such as that of the Sustainocene It involves telling people that nanotechnology will be used to make buildings function like trees A device that can do this and is available to cheap purchase

and installation like the mobile phone or internet by providing decentralised power equitably could rapidly transform society to one that is more community and values oriented Solar Fuels particularly those derived from nanotechnology based artificial photosynthesis represent an off grid energy water and climate change solution that may directly challenge substantial investments in ancient photosynthesis fuels by the World bank and multinational corporations in the energy sector as well as government subsidies This paper will examine immediate and long term prospects and potential mechanisms for facilitating collaboration between the major existing national and regional Solar Fuels projects or establishing a macrosience Global Solar Fuels GSF initiative

Nanotechnology for a Sustainable World Thomas Faunce, 2012 Does humanity have a moral obligation to emphasise nanotechnology's role in addressing the critical public health and environmental problems of our age This well crafted book explores this idea by analysing the prospects for a macrosience nanotechnology for environmental sustainability project in areas such as food water and energy supply medicine healthcare peace and security Developing and applying an innovative science based view of natural law underpinning a global social contract it considers some of the key scientific and governance challenges such a global project may face The book concludes that the moral culmination of nanotechnology is a Global Artificial Photosynthesis project It argues that the symmetric patterns of energy creating photosynthesis life and us are shaping not only the nanotechnological advances of artificial photosynthesis but also the ethical and legal norms likely to best govern such scientific achievements to form a sustainable existence on this planet Nanotechnology for a Sustainable World will appeal to many generations of scientists and policymakers working to improve our world in public health environmental sustainability and renewable energy and nanotechnology It will also be a valuable resource for similarly motivated students of chemistry physics biology nanotechnology and photosynthesis as well as environmental and energy ethics law and policy

Split by Sun Thomas Alured Faunce, 2018 Split by Sun is a synthesis of scientific and policy research into the globalisation of artificial photosynthesis blended with utopian and dystopian fiction The book explores significant questions about humanity responsibilities and use of new technologies against the dramatic backdrop of a future Earth where every road and building makes clean fuel food and fertiliser just from water sun and air With allusions and allegories to primary scientific and canonical literature as well as moral philosophy and jurisprudence it sets the emergence of a contemplative culture based on renewable energy and food technologies against the corporate world of neoliberal economics privatisation financial speculation and multilateral trade and investment agreements Its diverse characters face dangers and personal flaws in urban and wilderness settings across a Sustainocene world where global synthetic photosynthesis nanotechnology artificial intelligence and augmented reality systems facilitate universal basic income health care and education corporate marriage rights of nature liquid democracy and the elimination of war and nuclear weapons Provided by publisher
