

Chapter 01: Foundations of Maternity, Women's Health, and Child Health Nursing McKinney: Evolve Resources for Maternal-Child Nursing, 6th Edition

MULTIPLE CHOICE

1. Which factor significantly contributed to the shift from home births to hospital births in the early 20th century?
 - a. Puerperal sepsis was identified as a risk factor in labor and delivery.
 - b. Forceps were developed to facilitate difficult births.
 - c. The importance of early parental-infant contact was identified.
 - d. Technologic developments became available to physicians.

ANS: D

Technologic developments were available to physicians, not lay midwives. So in-hospital births increased in order to take advantage of these advancements. Puerperal sepsis has been a known problem for generations. In the late 19th century, Semmelweis discovered how it could be prevented with improved hygienic practices. The development of forceps is an example of a technology advance made in the early 20th century but is not the only reason birthplaces moved. Unlike home births, early hospital births hindered bonding between parents and their infants.

MSC: Client Needs: Safe and Effective Care Environment

2. Family-centered maternity care developed in response to
 - a. demands by physicians for family involvement in childbirth.
 - b. the Sheppard-Towner Act of 1921.
 - c. parental requests that infants be allowed to remain with them rather than in a nursery.
 - d. changes in pharmacologic management of labor.

ANS: C

As research began to identify the benefits of early extended parent-infant contact, parents began to insist that the infant remain with them. This gradually developed into the practice of rooming-in and finally to family-centered maternity care. Family-centered care was a request by parents, not physicians. The Sheppard-Towner Act of 1921 provided funds for state-managed programs for mothers and children. The changes in pharmacologic management of labor were not a factor in family-centered maternity care.

3. Which setting for childbirth allows the least amount of parent-infant contact?
 - a. Labor/delivery/recovery/postpartum room
 - b. Birth center

IBM SPSS for Introductory Statistics Karen C. Barrett, Nancy L. Leech, Gene W. Gloeckner, George A. Morgan, 2019-07-15
IBM SPSS for Introductory Statistics is designed to help students learn how to analyze and interpret research. In easy to understand language the authors show readers how to choose the appropriate statistic based on the design and to interpret outputs appropriately. There is such a wide variety of options and statistics in SPSS that knowing which ones to use and how to interpret the outputs can be difficult. This book assists students with these challenges. Comprehensive and user friendly the book prepares readers for each step in the research process: design, entering and checking data, testing assumptions, assessing reliability and validity, computing descriptive and inferential parametric and nonparametric statistics, and writing about results. Dialog windows and SPSS syntax along with the output are provided. Several realistic data sets available online are used to solve the chapter problems. This new edition includes updated screenshots and instructions for IBM SPSS 25 as well as updated pedagogy such as callout boxes for each chapter indicating crucial elements of APA style and referencing outputs. IBM SPSS for Introductory Statistics is an invaluable supplemental or lab text book for students. In addition, this book and its companion IBM SPSS for Intermediate Statistics are useful as guides, reminders to faculty and professionals regarding the specific steps to take to use SPSS and/or how to use and interpret parts of SPSS with which they are unfamiliar.
