Java Distributed Computing Jim Farley:

Java Distributed Computing Jim Farley, 1998 Distributed computing and Java go together naturally As the first language designed from the bottom up with networking in mind Java makes it very easy for computers to cooperate Even the simplest applet running in a browser is a distributed application if you think about it The client running the browser downloads and executes code that is delivered by some other system But even this simple applet wouldn't be possible without Java's guarantees of portability and security the applet can run on any platform and can't sabotage its host Of course when we think of distributed computing we usually think of applications more complex than a client and server communicating with the same protocol We usually think in terms of programs that make remote procedure calls access remote databases and collaborate with others to produce a single result Java Distributed Computing discusses how to design and write such applications It covers Java's RMI Remote Method Invocation facility and CORBA but it doesn't stop there it tells you how to design your own protocols to build message passing systems and discusses how to use Java's security facilities how to write multithreaded servers and more It pays special attention to distributed data systems collaboration and applications that have high bandwidth requirements In the future distributed computing can only become more important Java Distributed Computing provides a broad introduction to the problems you'll face and the solutions you'll find as you write distributed computing applications Topics covered in Java Distributed Computing Introduction to Distributed Computing Networking Basics Distributed Objects Overview of CORBA and RMI Threads Security Message Passing Systems Distributed Data Systems Databases Bandwidth Limited Applications Collaborative Systems Programming Embedded Systems in C and C++ Michael Barr, 1999 This book introduces embedded systems to C and C programmers Topics include testing memory devices writing and erasing flash memory verifying nonvolatile memory contents controlling on-chip peripherals device driver design and implementation and more Java Cookbook Ian F. Darwin, 2001 A comprehensive collection of problems solutions and practical examples for anyone programming in Java The Java Cookbook presents hundreds of tried and true Java recipes covering all of the major APIs as well as some APIs that aren't as well documented in other Java books The book provides quick solutions to particular problems that can be incorporated into other programs but that aren't usually programs in and of themselves **Enterprise JavaBeans** Richard Monson-Haefel, 2004 Enterprise JavaBeans Fourth Edition is the definitive guide to EJB 2.1 It shows you how to build complex mission critical systems using snap-together software components that model business objects and processes EJB 2.1 makes several important steps forward in EJB technology message-driven beans are much more flexible a time service has been added and EJBs have been integrated with web services Enterprise JavaBeans delivers on a promise that was astonishing a few years ago not only can EJBs run without modification on any operating system they can run on any J2EE application server However after writing EJBs you have to deploy them in an application server and deploying EJBs can be a painful task This edition includes the Jboss Workbook

which shows you how to deploy the examples on the open source JBoss Application Server If you've done any enterprise software development in the past few years you already know the extent to which EJB has changed the field Use this book to catch up on the latest developments If you're new to enterprise software development or if you haven't been working with EJB this book will bring you up to speed on this exciting technology for building business systems

Java in Distributed Systems Marko Boger, 2001-05-25 Large and complex software systems such as Internet applications depend on distributed applications Although Java has helped reduce the complexity of distributed systems developers still have to contend with diverse hardware platforms remote communication over networks and system failures Java in Distributed Systems provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications Beginning with a tutorial guide to distributed programming in the Java environment it shows you how building blocks from threads to Jini can help you to fulfil Sun's vision that the Network is the Computer It then goes on to focus on aspects that are still challenging researchers such as concurrency distribution and persistence Key Features One of the few books to focus specifically on Java for building distributed applications Coverage includes threads sockets RMI CORBA Voyager Mobile agents JDBC object oriented databases Java spaces and Jini Includes advanced chapters on the cutting edge of Java language development including the author's own proposed DeJav Distributed Java an open source project that offers a unified approach to concurrency distribution and persistence

Java Message Service David A Chappell, Richard Monson-Haefel, 2000-12-04 This book is a thorough introduction to Java Message Service JMS the standard Java application program interface API from Sun Microsystems that supports the formal communication known as messaging between computers in a network JMS provides a common interface to standard messaging protocols and to special messaging services in support of Java programs The messages exchange crucial data between computers rather than between users information such as event notification and service requests Messaging is often used to coordinate programs in dissimilar systems or written in different programming languages Using the JMS interface a programmer can invoke the messaging services of IBM's MQSeries Progress Software's SonicMQ and other popular messaging product vendors In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of

messaging into J2EE **Java & XML** Brett McLaughlin, 2001 Java and XML share many features that are ideal for building Web based enterprise applications This manual shows how to put the two together building applications in which both the code and the data are truly portable *Database Programming with JDBC and Java* George Reese, 1997 Software Programming Languages Applied SOA Patterns on the Oracle Platform Sergey Popov, 2014-08-12 Applied SOA Patterns on the Oracle Platform is aimed at architects practicing SOA or traditional integration and also at technical team leaders implementing Oracle Fusion under SCRUM or WF methodology Java Servlet Programming Jason Hunter, William Crawford, 1998 Java servlets offer a fast powerful portable replacement for CGI scripts This book covers everything one needs to write effective servlets Topics include serving dynamic Web content maintaining state information session tracking database connectivity using JDBC and applet servlet communication **Introducing the Java 2 Platform** David Flanagan, 1999 The Java Power Reference is a searchable browser based resource that documents all the packages and classes of the Java 2 platform on a single CD ROM Based on the clear concise quick reference style of the bestselling Java in a Nutshell the Java Power Reference provides a unique view of the functionality of the Java APIs In addition to the CD ROM the package also contains a concise printed overview of the newly released Java 2 platform **Java Distributed Objects** Bill McCarty, Luke Cassady-Dorion, 1999 This book is a comprehensive guide to Java distributed computing The book covers networking distributed computing architectures advanced Java facilities security data managing and specific distributed computing techniques including sockets Remote Method Invocation Java servlets Microsoft s Distributed Component Model and the Common Object Request Broker Architecture Exploring Java Patrick Niemeyer, Joshua Peck, 1997 Software Programming Languages Java Enterprise in a Nutshell David Flanagan, 1999 A quick reference for anyone who is doing enterprise development with Java these pages cover the RMI IDL JDBC JNDI and Java servlet APIs providing a fast paced tutorial on each of the technologies **PC/Computing** , 1998-04 Web Client Programming with Perl Clinton Wong, 1997 This text teaches users how to extend scripting skills to the Web Readers learn the basics of how browsers communicate with servers and how to write customized Web clients to automate common tasks *Java Examples in a Nutshell* David Flanagan, 2004 Bestselling author David Flanagan has fully updated his classic learn by example guide with added coverage of regular expressions new to the core Java API extended I O coverage new Java internationalization information and extensive coverage of the new Java GUI features *High Performance Cluster Computing* Rajkumar Buyya, 1999 This book offers experts on programming and applications for commodity supercomputers It is organized into three areas programming environments and development tools Java for high performance computing and algorithms and applications These three areas have seen major advances in recent years and this book addresses these subjects with breadth and depth For developers researchers administrators managers and users interested in the future of computing **An Introduction to Network Programming with Java** Jan Graba, 2003 With the explosion in growth of the internet and the increasing use of

intranets across a wide spectrum of business areas there has been a correspondingly large growth of interest in network programming particularly in the use of client server applications Java's inbuilt network programming capabilities and its platform independence have made it a natural choice for network applications and it has quite rightly been referred to as the language of the internet Exceptionally difficult and fraught with pitfalls in most languages the programming of network applications is greatly eased by the use of Java libraries An Introduction to Network Programming using Java is a streamlined text that provides clear guidance on all essential aspects of network programming that might be expected to appear on the syllabus of an undergraduate module in this area Areas covered include file handling JDBC servlets JavaBeans and Java
