### Javascript C

- Javascript is a high-level, dynamic, `scripting` language widely used to create interactive content, alongside HTML and CSS, it is one of the World Wide Web.
- Brendan Eich created Javascript in 1995 at Netscape Communications. It was originally named `Mocha` and finally `Javascript`.

### Key Features

**Client-side language** Primarily used to web interfaces and provide dynamic functionality.

**Event-driven** Javascript can respond to user submissions, and keyboard input, allowing for interactive web pages.

**Prototype-based** Javascript uses prototype objects to inherit properties and methods, it promotes a flexible and dynamic approach to programming.

**First-class Functions** Functions are treated as objects, they can be assigned to variables, passed as arguments, and returned from other functions.

**Asynchronous Programming** Javascript can execute multiple tasks simultaneously, allowing for efficient handling of long-running tasks without blocking the main execution thread.
