

## 2. STARTING SYSTEM

When the main switch is turned to the **PREHEAT** position, the terminal 30 is connected to the terminals 31 and 32. The glow plugs become heated, and at the same time, the pre-heat indicator lamp also lights on.

When the main switch is then turned to the **START** position with the safety switches on, the terminal 30 is connected to the terminal 31 and 32. Consequently, battery current flows to the starter motor and start the engine.

The main switch automatically returns to the **ON** position, the terminal 30 is connected only to the terminal 31, thereby causing the starting circuit to be opened, stopping the starter motor.

When the main switch turned from the **ON** position to the **OFF** position, the fuel cut-off solenoid moves the fuel injection pump control rack to the "No Fuel Injection" position and stop the engine.

## (1) STARTER

- 1) Housing
