Class String

java.lang.Object

java.lang.String

All implemented interfaces:

Serializable, CharSequence, ComparableString

public final class String

extends Object

implements Serializable, ComparableString, CharSequence

The `String` class represents character strings. All string literals in Java programs, such as `"abc"`, are implemented as instances of this class.

Strings are constant; their values cannot be changed after they are created. String buffers support mutable strings. Because String objects are immutable they can be shared. For example:

```
String str = "abc";
```

is equivalent to:

```
char data[] = {'a', 'b', 'c'};
String str = new String(data);
```
