Memo Of Maths 2014 Paper 1:

Noncommutative Geometry and Optimal Transport Pierre Martinetti,Jean-Christophe Wallet,2016-10-26 The distance formula in noncommutative geometry was introduced by Connes at the end of the 1980s It is a generalization of Riemannian geodesic distance that makes sense in a noncommutative setting and provides an original tool to study the geometry of the space of states on an algebra It also has an intriguing echo in physics for it yields a metric interpretation for the Higgs field In the 1990s Rieffel noticed that this distance is a noncommutative version of the Wasserstein distance of order 1 in the theory of optimal transport More exactly this is a noncommutative generalization of Kantorovich dual formula of the Wasserstein distance Connes distance thus offers an unexpected connection between an ancient mathematical problem and the most recent discovery in high energy physics The meaning of this connection is far from clear Yet Rieffel s observation suggests that Connes distance may provide an interesting starting point for a theory of optimal transport in noncommutative geometry This volume contains several review papers that will give the reader an extensive introduction to the metric aspect of noncommutative geometry and its possible interpretation as a Wasserstein distance on a quantum space as well as several topic papers   Weak Laplacian Bounds and Minimal Boundaries in Non-smooth Spaces with Ricci Curvature Lower Bounds Andrea Mondino,Daniele Semola,2025-07-09 View the abstract   **Shock Waves in Conservation Laws with Physical Viscosity** Tai-Ping Liu,Yanni Zeng,2015-02-06 The authors study the perturbation of a shock wave in conservation laws with physical viscosity They obtain the detailed pointwise estimates of the solutions In particular they show that the solution converges to a translated shock profile The strength of the perturbation and that of the shock are assumed to be small but independent The authors assumptions on the viscosity matrix are general so that their results apply to the Navier Stokes equations for the compressible fluid and the full system of magnetohydrodynamics including the cases of multiple eigenvalues in the transversal fields as long as the shock is classical The authors analysis depends on accurate construction of an approximate Green s function The form of the ansatz for the perturbation is carefully constructed and is sufficiently tight so that the author can close the nonlinear term through Duhamel s principle   *Julia Sets and Complex Singularities of Free Energies* Jianyong Qiao,2015-02-06 The author studies a family of renormalization transformations of generalized diamond hierarchical Potts models through complex dynamical systems He proves that the Julia set unstable set of a renormalization transformation when it is treated as a complex dynamical system is the set of complex singularities of the free energy in statistical mechanics He gives a sufficient and necessary condition for the Julia sets to be disconnected Furthermore he proves that all Fatou components components of the stable sets of this family of renormalization transformations are Jordan domains with at most one exception which is completely invariant In view of the problem in physics about the distribution of these complex singularities the author proves here a new type of distribution the set of these complex singularities in the real temperature domain could contain an interval Finally the author studies the boundary

behavior of the first derivative and second derivative of the free energy on the Fatou component containing the infinity He also gives an explicit value of the second order critical exponent of the free energy for almost every boundary point

Higher Structures in Topology, Geometry, and Physics Ralph M. Kaufmann,Martin Markl,Alexander A. Voronov,2024-07-03 This volume contains the proceedings of the AMS Special Session on Higher Structures in Topology Geometry and Physics held virtually on March 26 27 2022 The articles give a snapshot survey of the current topics surrounding the mathematical formulation of field theories There is an intricate interplay between geometry topology and algebra which captures these theories The hallmark are higher structures which one can consider as the secondary algebraic or geometric background on which the theories are formulated The higher structures considered in the volume are generalizations of operads models for conformal field theories string topology open closed field theories BF BV formalism actions on Hochschild complexes and related complexes and their geometric and topological aspects **Yearbook of International Organizations 2014-2015, Volumes 1a & 1b (Set)** Union of International Associations,2014-06-16 Volume 1 A and B covers international organizations throughout the world comprising their aims activities and events

Equivalence Amanda L. Golbeck,2017-04-28 Equivalence Elizabeth L Scott at Berkeley is the compelling story of one pioneering statistician s relentless twenty year effort to promote the status of women in academe and science Part biography and part microhistory the book provides the context and background to understand Scott s masterfulness at using statistics to help solve societal problems In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high speed computers Scott worked on an impressively broad range of questions in science from whether cloud seeding actually works to whether ozone depletion causes skin cancer Later in her career Scott became swept up in the academic women s movement She used her well developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women The book invites the reader into Scott s universe a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk **Quasi-Linear Perturbations of Hamiltonian Klein-Gordon Equations on Spheres** J.-M. Delort,2015-02-06 The Hamiltonian $\int_X t u^2 u^2 m2 u^2 dx$ defined on functions on $R \times X$ where X is a compact manifold has critical points which are solutions of the linear Klein Gordon equation The author considers perturbations of this Hamiltonian given by polynomial expressions depending on first order derivatives of u The associated PDE is then a quasi linear Klein Gordon equation The author shows that when X is the sphere and when the mass parameter m is outside an exceptional subset of zero measure smooth Cauchy data of small size give rise to almost global solutions i e solutions defined on a time interval of length $cN N$ for any N Previous results were limited either to the semi linear case when the perturbation of the Hamiltonian depends only on u or to the one dimensional problem The proof is based on a quasi

Higher-Order Time Asymptotics of Fast Diffusion in Euclidean Space: A Dynamical Systems Approach Jochen Denzler,Herbert Koch, Robert J. McCann,2015-02-06 This paper quantifies the speed of convergence and higher order asymptotics of fast diffusion dynamics on Rn to the Barenblatt self similar solution Degeneracies in the parabolicity of this equation are cured by re expressing the dynamics on a manifold with a cylindrical end called the cigar The nonlinear evolution becomes differentiable in H lder spaces on the cigar The linearization of the dynamics is given by the Laplace Beltrami operator plus a transport term which can be suppressed by introducing appropriate weights into the function space norm plus a finite depth potential well with a universal profile In the limiting case of the linear heat equation the depth diverges the number of eigenstates increases without bound and the continuous spectrum recedes to infinity The authors provide a detailed study of the linear and nonlinear problems in H lder spaces on the cigar including a sharp boundedness estimate for the semigroup and use this as a tool to obtain sharp convergence results toward the Barenblatt solution and higher order asymptotics In finer convergence results after modding out symmetries of the problem a subtle interplay between convergence rates and tail behavior is revealed The difficulties involved in choosing the right functional spaces in which to carry out the analysis can be interpreted as genuine features of the equation rather than mere annoying technicalities   *Guide to Microforms in Print* ,1989   **Palmer's Index to "The Times" Newspaper** ,1917   *National Union Catalog* ,1956 Includes entries for maps and atlases   **The Parliamentary Debates (Hansard).** Great Britain.
