Coral Reefs: An Ecosystem in Transition Zvy Dubinsky, Noga Stambler, 2010-12-02 This book covers in one volume materials scattered in hundreds of research articles in most cases focusing on specialized aspects of coral biology. In addition to the latest developments in coral evolution and physiology it presents chapters devoted to novel frontiers in coral reef research. These include the molecular biology of corals and their symbiotic algae, remote sensing of reef systems, ecology of coral disease, spread effects of various scenarios of global climate change, ocean acidification effects of increasing CO₂ levels on coral calcification and damaged coral reef remediation. Beyond extensive coverage of the above aspects, key issues regarding the coral organism and the reef ecosystem such as calcification, reproduction, modeling, algae, reef invertebrates, competition, and fish are re-evaluated in the light of new research and emerging insights. In all chapters, novel theories as well as challenges to established paradigms are introduced, evaluated, and discussed. This volume is indispensable for all those involved in coral reef management and conservation.

Modern Approaches to Data Assimilation in Ocean Modeling P. Malanotte-Rizzoli, 1996-05-10 The field of oceanographic data assimilation is now well established. The main area of concern of oceanographic data assimilation is the necessity for systematic model improvement and ocean state estimation. In this respect, the book presents the newest innovative applications combining the most sophisticated assimilation methods with the most complex ocean circulation models. Ocean prediction has also now emerged as an important area in itself. The book contains reviews of scientific oceanographic issues covering different time and space scales. The application of data assimilation methods can provide significant advances in the understanding of this subject. Also included are the first recent developments in the forecasting of oceanic flows. Only original articles that have undergone full peer review are presented to ensure the highest scientific quality. This work provides an excellent coverage of state of the art oceanographic data assimilation.

Transformative Sustainability Education Elizabeth A. Lange, 2023-03-28 This book lays out the principles and practices of transformative sustainability education using a relational way of thinking and being. Elizabeth A. Lange advocates for a new approach to environmental and sustainability education that of rethinking the Western way of knowing and being and engendering a frank discussion about the societal elements that are generating climate, environmental, economic, and social issues. Highlighting the importance of Indigenous and life-giving cultures, the book covers educational theory, transformation stories of adult learners, social and economic critique, and visions of changemakers. Each chapter also has a strong pedagogical element with entry points for learners and embodied practices and examples of taking action at micro, meso, macro levels woven throughout. Overall, this book enacts a relational approach to transformative sustainability education that draws from post-humanist theory, process thought, relational ontology, decolonization theory, Indigenous philosophy, and a spirituality that builds a sense of sacred towards the living world. Written in an imaginative storytelling manner, this book will be a great resource for formal and nonformal environmental and sustainability educators.
