Manual Transmission Synchronizer:

Synchronization Processes and Synchronizer Mechanisms in Manual Transmissions Ana Pastor bedmar,2012

The transmission system is one of the main parts that determines the behavior power and fuel economy of a vehicle Transmission performance is usually related to gear efficiency gear noise and gear shift comfort during gear change Synchronizer mechanisms allow gear changing in a smooth way noiseless and without vibrations both for the durability of the transmission and the comfort for the users As a consequence it is aimed an improvement of the dynamic shift quality by reducing shifting time and effort especially in heavy truck applications This Master s Thesis project deals with a study of the synchronization processes in manual transmission gearboxes with focus on commercial vehicles A description of the different types of synchronizers is given followed by its components and how they interact with each other in order to complete the gear changing process namely the synchronization process Then quality factors are indentified and their effect on the performance and thus synchronizer efficiency In this project a model of the manual transmission synchronizer is developed It is divided into eight different phases corresponding to different events in the process Only the first three phases have been implemented in Matlab and simulated with different values of some design parameters in order to analyze the response The results show a good qualitative agreement with the literature
