 Book 2 Upper Quadrant An Evaluation of the Changes in Manual Therapy Techniques in Physical Therapy Nelson Alberto  
 Rojas, 2022 Prior research has focused on comparing the effects of manual therapy techniques used in physical therapy in  
 different conditions to determine which technique is more effective and less invasive for the patient However no focus has  
 been placed on identifying and evaluating the changes in manual therapy techniques This study aims to evaluate the changes  
 in manual therapy techniques from the perspective of current and retired physical therapists who are or were licensed in  
 Washington state Eighteen participants completed a modified Physical Therapy Profile Questionnaire PTPQ to explore their  
 experience with manual therapy techniques and whether they implemented changes in their practice of these techniques The  
 results suggest that changes in manual therapy techniques occur as physical therapists gain and develop more experience  
 working with many clients and treating different conditions Joint mobilization taping and muscle energy techniques were the  
 most used and recommended manual therapy techniques by physical therapists in this sample There was no significant  
 correlation between the years of practice and the number of manual therapy techniques selected by participants  $r = 0.044$   $p = 0.887$   
 This study suggests that changes and adjustments in manual therapy techniques have occurred throughout time as  
 physical therapists gain practice in the field and can identify what manual technique will produce a better patient outcome in  
 a specific patient Therapeutic Stretching in Physical Therapy Eyal Lederman, 2013-08-19 Prepared by an international
