

## Taking Readings from the I-TECH Subsea Bullseye / Slope Indicator

- Reading area — The decal is visible through the top of the bullseye [appearance may differ depending on the size and measurement scale]
- Ball — The ball moves to indicate the inclination of the surface
- Centre point — The solid spot identifies the centre point of the bullseye
- Increments — The concentric circles identify angle measurement increments, for example this 2° decal is marked from the centre point at 0.5°, 1.0°, 1.5° and 2°.
- Quadrants — The decal is divided into four quadrants. The quadrants can be aligned and used to identify direction.

Two scenarios are illustrated here, the corresponding readings and conclusions are noted below.

- Ball position = centre point
- Bullseye reading = 0°
- Conclusions = surface is level

Low Point

High Point

- Ball position = above the second circular line in quadrant 1
- Bullseye reading = 1°
- Conclusions = surface is 1° off the level along the axis aligned with the ball and the centre point

**NOTE:** For the purposes of this illustration a 350mm diameter subsea bullseye x 2° measurement scale has been used nominally. Other bullseye sizes and measurement scales will vary in appearance however the general principles apply across the range.
