Taking a fresh approach it offers a wide range of techniques for planning lessons that allow them to use current resources including themselves in a more innovative way to produce outstanding results. With a strong focus on activating learning and supporting pupils as they connect mathematical concepts and processes and develop their individual learning journeys the book covers: A step by step approach to planning for learning; Assessment for learning and planning for progress; Developing effective questioning strategies to promote thinking skills in pupils; Techniques for differentiation to ensure all pupils make progress; Using the classroom environment to develop a culture of learning. To complement the natural process of learning each activity builds on the previous one from concrete to pictorial to abstract. Dr Thompson's unique three step approach encourages students to first recognize patterns then use diagrams, tables and graphs to illustrate algebraic concepts and finally apply what they've learned through cooperative games, puzzles, problems and activities using a graphic calculator and computer. You'll find each activity has complete teacher directions, lists of materials needed and helpful examples for discussion, homework and quizzes. Most activities include time saving reproducible worksheets for use with individual students, small groups or the entire class.
