

The K_{sp} of Lead Iodide, PbI₂

C12-4-13 & C12-1-01

Fact: Many barium compounds are extremely poisonous, yet barium sulfate is routinely swallowed by patients in order to get clearer x-ray pictures of their lower intestines. Why doesn't barium sulfate poison these patients?

Fact: It is possible to saturate a swimming pool with silver bromide and kill off all the nasty little micro-organisms such as algae and bacteria, so that the pool water remains clean and sparkling, yet the water is as pure as drinking water and harmless to people. Since silver ion is a heavy metal ion and hence dangerous to our health in large doses, how is it possible that water saturated with silver bromide doesn't harm us?

The answers to the puzzling questions posed above lies in the low solubility of many salt compounds.

Introduction:

When ionic solids dissolve, they dissociate into their positive and negative ions that make up the solids. These ions become hydrates and have the same relative proportions when in solution and when solid. The more the solid dissolves, the more the ion concentration increases. This increase in ion concentration allows for the reverse reaction (crystallization) to occur. Eventually the rate of dissolving will equal the rate of crystallization. This state of saturation is called equilibrium. This state can be recognized by a constant color or constant mass.

Consider the solubility equilibrium of a saturated solution of AgCl:

CHEMISTRY EXPERIMENTS James Signorelli, 2014-09-19 Gifted and talented students and any student interested in pursuing a science major in college needs a rigorous program to prepare them while they are still in high school This book utilizes a format where the application of several disciplines science math and language arts principles are mandated Each lab concludes with either an essay or a detailed analysis of what happened and why it happened This format is based on the expectations of joining a university program or becoming an industrial science professional The ideal student lab report would be written in a lab research notebook and then the essay or final analysis is done on a word processor to allow for repeat editing and corrections The research notebook has all graph pages a title section and a place for the students and their assistants to sign and witness that exercise The basic mechanics of the lab report title purpose procedure diagrams data table math and calculations observations and graphs are handwritten into the book The conclusion is done on

a word processor MS Word which allows the instructor to guide the student in writing and editing a complete essay using the MLA format When the final copy is completed the essay is printed and inserted into the lab notebook for grading At the end of the term the student has all their labs in one place for future reference These lab notebooks can be obtained for as little as 3 00 per book This is money well spent In our district the Board of Education buys the books for each student The BOE sees these books as expendable but necessary materials for all science and engineering instruction

Harris, 2005 Exploring Chemical Analysis teaches students how to understand analytical results and how to use quantitative manipulations preparing them for the problems they will encounter Russian Journal of Physical Chemistry, 1984 Fundamental Aspects of Crystallization and Precipitation Processes Daina M. Briedis, 1987 New Trends in Chemistry Teaching Edward Cartmell, 1967 **AIChE Symposium Series** American Institute of Chemical Engineers, 1986 **Lead Iodide X-ray and Gamma-ray Spectrometers for Room and High Temperature Operation**, 1997 In this study we report on the results of the investigation of lead iodide material properties The effectiveness of zone refining purification methods on the material purity is determined by ICP MS and ICP OES and correlated to the electrical and physical material properties We show that this zone refining method is very efficient

in removing impurities from lead iodide and we also determine the segregation coefficient for some of these impurities Triple axis x ray diffraction TAD analysis has been used to determine the crystalline perfection of the lead iodide after applying various cutting etching and fabrication methods The soft lead iodide crystal was found to be damaged when cleaved by a razor blade but by using a diamond wheel saw followed by etching the crystallinity of the material was improved as observed by TAD Low temperature photoluminescence also indicates an improvement in the material properties of the purified lead iodide Electrical properties of lead iodide such as carrier mobility were calculated based on carrier phonon scattering The results for the electrical properties were in good agreement with the experimental data
