Muhamad, 2023-07-07 This book is a collection of eight studies covering several areas pertinent to the current technological and banking services situation in the Kurdistan region of Iraq The economy of the Kurdistan Region of Iraq KRI is mainly dependent on oil revenue The oil export revenue constitutes more than 90% of the government's fiscal revenue In addition to that the public sector plays an excessive role in the economy with public spending to GDP being over 70% while revenue from taxation constitutes less than 30% of total revenue As the economy is not diversified there is a large gap between demand and supply of locally produced tradeable goods leaving the KRI economy highly dependent on imports Another structural challenge of the KRI economy is its dependence on cash and a weekly financial system Although the region has witnessed extraordinary economic growth from 2008 to 2014 the growth rate decreased from 8 to 1 percent trade and investment dropped to 5 percent and the unemployment rate significantly increased to over 20% by the end of the year 2019 To maintain the progress of economic development it is necessary to upgrade the country's industrial structure in order to be able to generate more value added products which requires

advancement in technological infrastructure to employ more sophisticated technologies There is not much written about Kurdistan and its economy and yet there is a comprehensive development plan and resources to be used for education research rehabilitation development and reconstruction As such this book would be of interest to researchers decision makers governmental and non governmental organizations undergraduate and graduate students and the general public with an interest in the Middle East and contemporary Kurdish issues It is a good up to date handbook for policymakers and NGOs involved in the rehabilitation reconstruction and development of Iraq

acquisition, processing and analysis of motion data Nikolas Alexander Theissen,2015-02-04 Bachelor Thesis from the year 2015 in the subject Engineering Computer Engineering Rhine Waal University of Applied Sciences language English abstract Companies need to adapt their product management with regard to variability quality availability and price to cope with demands for mass customization efficiency or sustainability These adaptations are implemented in form of changes of machinery processes or philosophy However the unpredictable benefit of a change is opposed by factors such as scarcity of resources a lack of expertise and doubts Therefore this bachelor s thesis focuses on the development of a model factory that offers companies the alternative to simulate changes in their production management and investment in some of the latest technology on a smaller scale The participants who can be third parties and students are introduced to principles and methods of lean production systems The lean production system teaches to focus on the essentials of production to decrease

the time between the order and the delivery that is to say the time between the company's investment and the customer's payment. The knowledge about lean production systems is vital for every professional's working life in the field of industrial production. The model factory Lean Game 4.0 is a mockup of production and logistic facilities of a fictitious versatile series engine manufacturer, the HSRW Engine Manufacturing Company. The participation in the simulation offers a varying number of players the opportunity to survey realistic industrial processes and equipment in a short lapse of time. The game is customized to fit different levels of previous knowledge and available time. Depreciative to the Industrie 4.0, that is the German term for the fourth industrial revolution which in English is commonly referred to as Industrial Internet, the game uses synergies of the cooperation between machinery, information technology and human employees. The participants use a SICK radio frequency identification (RFID) system and G G bulk material scales for the automated acquisition, processing and analysis of motion data. The present bachelor's thesis describes the planning, development and implementation of the Lean Game 4.0. For that purpose, it contains information about the fundamentals of lean production systems, radio frequency identification and their utilization in the Lean Game 4.0. Finally, the thesis provides recommendations and information on possible follow-up projects for the improvement of the Lean Game 4.0.
