Rheology of Semisolid Foods Helen S. Joyner, 2019-11-13 Rheology of Semisolid Foods comprehensively covers the rheological behaviors and rheological testing of semisolid foods Individual chapters focus on semisolid food structure rheological and sensory behaviors testing of various semisolid food behaviors and factors that impact those behaviors Special concentration is given to the relationships among semisolid food structures and mechanical properties and textures The second section of this work presents a series of case studies on acid milk gels and yogurt which provide a practical illustration of the concepts presented in the preceding chapters allowing readers to gain both conceptual knowledge of semisolid food rheology and an understanding of how that knowledge can be applied to a food system of choice Individual components processing parameters and storage conditions can dramatically impact food functional properties and textures Changing any of these factors can cause significant

microstructural alterations resulting in undesirable changes in product stability functionality and texture The lack of knowledge of how these factors impact the final food properties makes development of new food products a process of empirical trial rather than intentional design A fundamental understanding food structure function and texture relationships is critical for targeted design of food products This text is a valuable reference for researchers looking to gain an understanding of how rheology works in semisolid food design and processing **American Laboratory** ,2002 **Feedlot Cattle Nutrition and Metabolism** Danilo Domingues Millen,Pedro Henrique Vilela Carvalho,Rodrigo Marques,2023-07-31 The increasing demand for high quality beef has led to the necessity of including higher levels of cereal grains and its by products into cattle diets In this context adequate nutrition of beef cattle involves knowledge of energy and nutrient requirements to define specific nutritional strategy The evolution feeding strategies to feedlot cattle depends on advances related to ruminant metabolism as well as to the ruminal microbiota Furthermore a continuous flow of knowledge development in feedlot cattle nutrition and metabolism is important as new feeds additives or even new management approaches come up very often and new scenarios will impact protein and energy metabolism the ruminal microbiota and also strategies to modulate ruminal fermentation to improve health and performance of feedlot cattle Overall the main goal of this Research Topic is to contribute with recent advances in feedlot cattle nutrition and metabolism addressing studies related to the nutrition of high performing ruminants with a special emphasis on the feed efficiency ruminal fermentation and animal performance Furthermore we are interested in different aspects of sustainability and efficiency In other words the goal is to attract studies that address such issues both from a general perspective and in relation to specific domains Hence the integration of existing and current knowledge will help refine strategies to optimize the performance of feedlot cattle
