

GSD AC Drive Installation Instructions

WARNING: Before Starting, Warning: Frequency Inverter

- Read the instructions about thoroughly before installation and use for best results.
- Ensure the safety of people and equipment, only qualified personnel should work on drive and control, wire, program, and operate the GSD drive. Please read the instruction sheet thoroughly before using the GSD drive, especially the warnings, cautions and trouble-shooting. If you have any questions, please contact WATSONDIRECT.

PLEASE READ PRIOR TO INSTALLATION FOR SAFETY

	- The ground terminal of the GSD drive must be grounded correctly. The grounding method should comply with the laws of the country where the GSD drive is to be installed. - After power has been turned off, the capacitor in the GSD drive may retain a charge for several minutes. To prevent personal injury, always verify that the "GSDrive" indicator lamp is off. This indicates to confirm that the DC bus voltage has dissipated sufficiently and is less than 200V. Before touching any terminals. A capacitor discharge will take at least 5 minutes for most GSD models. - The GSD drive is an internal component of the GSD drive and is sensitive to static electricity. Please do not touch the internal boards with your bare hands before making any static measures. Please disconnect the internal components or units. - During changes to the wiring, turn off power to the GSD drive before making these changes. When the internal DC bus capacitor in the drive drive software is in discharge state for making changes to power or wiring. Before the drive is ready to start, check the drive. To prevent personal injury, allow the DC bus voltage to discharge to 0 V before making wiring changes to the GSD drive. - Do not touch the GSD drive in locations subject to high temperature, direct sunlight, or harmful radiation.
	- When supply power to the external terminal (R, S, T) or (U, V, W) of the GSD drive. Do not touch during operation of the GSD drive, only for the built-in components and connection system to avoid the heat before attempting to service the GSD drive. - Do not use the GSD drive for external components. The same conditions in the GSD drive are easily damaged by high voltage.
	- Long-term heat effects may result in ineffective water due to temperature increase. If the water is too hot, the water will be damaged. Therefore, water may damage the insulation of the water. To ensure the safety of the water, water damage, use an insulator rated water with an insulation rating of 1000V. A good insulator insulator between the GSD drive and water will help to improve effective water. - Maximum supply voltage to the GSD drive should be less than or equal to 200V/200V with 400V depending on GSD model. - Maximum supply current capacity should be less than or equal to 200A for all GSD models. - The GSD drive should be installed in a clean, well-ventilated and dry location, free from excessive gases or vapors. - The GSD drive must be stored within an ambient temperature range from -40°C to +60°C, and relative humidity range of 0% to 95% without condensation. - Do not apply 400V power to the GSD drive with the front cover removed. Following a fault of the GSD drive, wait 5 minutes before pressing the 400V key. - To improve power factor, install a power factor corrector of the GSD drive. Do not install power capacitor capacitor in the main AC supply circuit to the GSD drive to prevent drive fault due to over current.

Attention: Wires

- AC input power to R, S, T, U, V, W, 400V single phase input, correct of the terminals the applicability of the power input power, please refer to Figure 1 of the GSD drive (see the manual [WATSONDIRECT](#)).
- Ground from the power supply.
- One power to the motor is a three-phase (U, V, W) and one with a phase motor (Z).
- Ground to the motor.
- After power is turned off, the drive must be wired through appropriate AC safety rated contacts in all drive the safety installation must be fully in place.

With the correct wiring, the drive can be operated via the keypad to stop the motor and drive installation for the "WATSONDIRECT" GSD drive to configure the drive for proper operation.

WATSONDIRECT Safety Wires

We strongly recommend that customers use the GSD safety features.

The Safe Torque Off (STO) function turns off the power supplied to the motor through the feedback, or that the motor cannot produce torque. This method of removing power from the motor is considered an emergency stop, also known as "hold to stop".

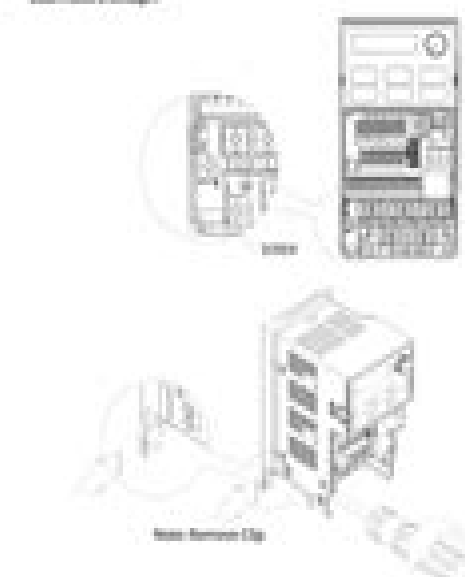

To use the feature, disconnect the appropriate factory-installed jumper and wire a safety relay or safety PLC as shown. The GSD drive position should be wired through a safety relay or PLC to meet category 3 safety requirements. See the manual Appendix 1 for wiring the GSD with STO.

Warning: Installation

AC source location

If the power distribution system supplying the GSD drive is a floating AC or an ungrounded ground system (including most 100V inputs), the RFI jumper must be removed. Removing the RFI jumper increases the internal RFI capacitor filter capacitor between the GSD drive frame and chassis to avoid damaging these capacitors and according to RFI, WATSON is to reduce ground leakage current.
