

- There are three categories of mutations, depending on how much DNA is impacted
 - gene mutation affect one or a few nucleotides of one gene
 - chromosomal mutations affect many genes on one or more chromosomes
 - aneuploidy affects whole chromosomes

WHAT ARE GENE MUTATIONS?

- Gene mutations may involve a single (or a few) nucleotides
 - They typically have less of an impact than chromosomal mutations, because they involve changes to the DNA on a smaller scale
 - Nucleotides vs genes

- There are 3 types of gene mutations:

- Substitution (or point mutation): One nucleotide is switched out (substituted) for another
 - Only 1 codon is affected
