V6 engines are the highest expression of design and engineering efficiency that Volkswagen Motors AG could develop in the motor plant. They are highly sensitive engines designed to be able to comply even with the regulations on torque and engine emissions that will be introduced in the near future.

Designed with innovative techniques and manufactured with advanced working practices, they are the result of hundreds of years of design and engineering tradition as well as of the most advanced structural innovation.

The excellent performance of H&M engines originates from evolution and subsequent starts of new design efforts by improving the gas exchange process, the intake or turbo-charger is improved, thus enabling the complete exploitation of the new injection system capacity.

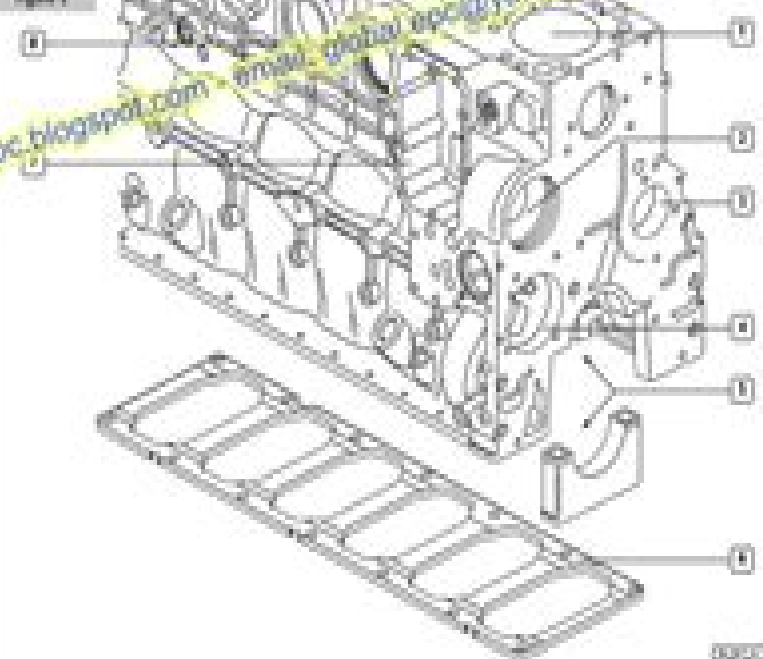

The new criteria chosen in defining the parameter setting the optimization conditions, ensuring and inspecting, enable to obtain new balance between high performance and consumption reduction. Still engines can be fitted with a mechanical pump or a total electronic controlled (TCC) engine. Fuel injection system.

Every individual volume has been accurately checked so as to ensure qualitative product perfection. The configuration of the engine itself has been designed in such a way as to facilitate access to each individual part thus reducing maintenance time.

Cybernet uses fluid with two valves per cylinder, not timing control, race design, increasing risk and distribution-related prices are components of an engine fluid with 45% less viscosity than an engine of equivalent performance.
