**Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments** Durak, Gürhan, Çankaya, Serkan, 2021-12-17 In order to be successful online learning should be planned systematically. It can be said that offering distance education courses without preparation and knowledge about the theoretical background can cause drawbacks. While distance education has become widespread and popular, it is observed that there could be problems in its application. Such problems can include technical problems, inability to meet the learning needs at the learners' own speeds, lack of communication among learners and between learners and teachers, and lack of quality materials appropriate for online learning or the inclusion of materials used in traditional methods directly into online learning. For successful online courses, these critical aspects of distance education are important and they should be taken into account by the institutions and the instructors offering online courses. The Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments provides up-to-date knowledge and experiences regarding technologies, processes, and environments for online course design in distance education systems and covers topics related to the aspects of successful distance education systems with a focus on teaching and learning in online environments. Focusing on topics such as instructional design and integrated systems, it is an ideal guide for online course designers, instructional designers, curricula developers, administrators, educators, researchers, trainers, and students.

**Modelo de enseñanza de estadística en ingeniería aplicando tecnología educativa** Montserrat Lino González, Ricardo Chaparro Sánchez, José Alberto Rodríguez Morales, 2025-07-09 El libro Modelo de Enseñanza de la Estadística en Ingeniería Aplicando Tecnología Educativa explora estrategias innovadoras para la enseñanza de la estadística en carreras de ingeniería integrando herramientas tecnológicas y metodologías activas. Aborda la importancia de contextualizar el aprendizaje estadístico mediante el uso de software especializado, laboratorios virtuales y plataformas educativas promoviendo el desarrollo de competencias profesionales. El texto destaca el papel del docente como facilitador y la necesidad de adaptar los contenidos a los retos actuales del sector ingenieril. Además, propone secuencias didácticas basadas en proyectos y aprendizaje colaborativo favoreciendo la comprensión y aplicación real de la estadística.

**Data Science** Ivo D. Dinov, Milen Velchev, 2021-12-06 The amount of new information is constantly increasing faster than our ability to fully interpret and utilize it to improve human experiences. Addressing this asymmetry requires novel and revolutionary scientific methods and effective human and artificial intelligence interfaces. By lifting the concept of time from a positive real number to a 2D complex time-kime, this book uncovers a connection between artificial intelligence, AI, data science, and quantum mechanics. It proposes a new mathematical foundation for data science based on raising the 4D spacetime to a higher dimension where

longitudinal data e.g. time series are represented as manifolds e.g. kime surfaces. This new framework enables the development of innovative data science analytical methods for model based and model free scientific inference derived from computed phenotyping and statistical forecasting. The book provides a transdisciplinary bridge and a pragmatic mechanism to translate quantum mechanical principles such as particles and wavefunctions into data science concepts such as datum and inference functions. It includes many open mathematical problems that still need to be solved, technological challenges that need to be tackled, and computational statistics algorithms that have to be fully developed and validated. Spacekime analytics provide mechanisms to effectively handle and process and interpret large heterogeneous and continuously tracked digital information from multiple sources. The authors propose computational methods, probability model based techniques, and analytical strategies to estimate, approximate, or simulate the complex time phases, kime directions. This allows transforming time varying data such as time series observations into higher dimensional manifolds representing complex valued and kime indexed surfaces, kime surfaces. The book includes many illustrations of model based and model free spacekime analytic techniques applied to economic forecasting, identification of functional brain activation, and high dimensional cohort phenotyping. Specific case study examples include unsupervised clustering using the Michigan Consumer Sentiment Index (MCSI), model based inference using functional magnetic resonance imaging (fMRI) data, and model free inference using the UK Biobank data archive. The material includes mathematical, inferential, computational, and philosophical topics such as Heisenberg uncertainty principle and alternative approaches to large sample theory where a few spacetime observations can be amplified by a series of derived, estimated, or simulated kime phases. The authors extend Newton-Leibniz calculus of integration and differentiation to the spacekime manifold and discuss possible solutions to some of the problems of time. The coverage also includes 5D spacekime formulations of classical 4D spacetime mathematical equations describing natural laws of physics as well as statistical articulation of spacekime analytics in a Bayesian inference framework. The steady increase of the volume and complexity of observed and recorded digital information drives the urgent need to develop novel data analytical strategies. Spacekime analytics represents one new data analytic approach which provides a mechanism to understand compound phenomena that are observed as multiplex longitudinal processes and computationally tracked by proxy measures. This book may be of interest to academic scholars, graduate students, postdoctoral fellows, artificial intelligence and machine learning engineers, biostatisticians, econometricians, and data analysts. Some of the material may also resonate with philosophers, futurists, astrophysicists, space industry technicians, biomedical researchers, health practitioners, and the general public.
