Seduced By Mathematics: The Enduring Fascination Of Mathematics James D Stein, 2022-07-20 Seduction is not just an end result but a process and in mathematics both the end results and the process by which those end results are achieved are often charming and elegant This helps to explain why so many people not just those for whom math plays a key role in their day to day lives have found mathematics so seductive Math is unique among all subjects in that it contains end results of amazing insight and power and lines of reasoning that are clever charming and elegant This book is a collection of those results and lines of reasoning that make us say OMG that s just amazing because that s what mathematics is to those who love it In addition some of the stories about mathematical discoveries and the people who discovered them are every bit as fascinating as the discoveries themselves This book contains material capable of being appreciated by students in elementary school as well as some material that will probably be new to even the more mathematically sophisticated Most of the book can be easily understood by those whose only math courses are algebra and geometry and who may have missed the magic enchantment and wonder that is the special province of mathematics

Mathematics Tomorrow L.A. Steen, 2012-12-06 Mathematics today is approaching a state of crisis As the demands of science and society for mathematical literacy increase the percentage of American college students intending to major in mathematics plummets and achievement scores of entering college students continue their unremitting decline As research in core mathematics reaches unprecedented heights of power and sophistication the growth of diverse applied specialties threatens to fragment mathematics into distinct and frequently hostile mathematical sciences These crises in mathematics presage difficulties for science and engineering and alarms are beginning to sound in the scientific and even in the political communities Citing a trend towards virtual scientific and technological illiteracy and a shrinking of our national commitment to excellence in science mathematics and technology a recent study conducted for the President by the U S National Science Foundation and Department of Education warns of serious impending shortcomings in public understanding of science Today people in a wide range of non scientific professions must have a greater understanding of technology than at any time in our history Yet our educational system does not now provide such understanding The study goes on to conclude that present trends pose great risk of manpower shortages in the mathematical and engineering sciences The pool from which our future scientific and engineering personnel can be drawn is in danger of becoming smaller even as the need for such personnel is increasing It is time to take a serious look at mathematics tomorrow

Exploring Mathematics and Science Teachers' Knowledge Hamsa Venkat, Marissa Rollnick, John Loughran, Mike Askew, 2014-05-09 Globally mathematics and science education faces three crucial challenges an increasing need for mathematics and science graduates a declining enrolment of school graduates into university studies in these disciplines and the varying quality of school teaching in these areas Alongside these challenges internationally more and more non specialists are teaching mathematics and science at both primary and secondary levels and research evidence has revealed how gaps and limitations in teachers content understandings can lead to classroom practices that present barriers to students learning This book addresses these issues by investigating how teachers content knowledge interacts with their pedagogies across diverse contexts and perspectives This knowledge practice nexus is examined across mathematics and science teaching traversing schooling phases and countries with an emphasis on contexts of disadvantage These features push the boundaries of research into teachers content knowledge The book's combination of mathematics and science enriches each discipline for the reader and contributes to our understandings of student attainment by examining the nature of specialised content knowledge needed for competent teaching within and across the two domains Exploring Mathematics and Science Teachers Knowledge will be key reading for researchers doctoral students and postgraduates with a focus on Mathematics Science and teacher knowledge research
