Mathematics Paper 1 March 2014

Thomas H. Otway

Mathematics Paper 1 March 2014:

Inspiring Primary Learners Roger McDonald, Poppy Gibson, 2021-02-25 Inspiring Primary Learners offers trainee and qualified teachers high quality case studies of outstanding practice in contemporary classrooms across the country. Expert authors unravel and reveal the theory and evidence that underpins lessons helping you make connections with your own practice and understand what excellent looks like within each context and how it is achieved. Illustrated throughout with interviews, photos and examples of children's work, it covers a range of primary subjects and key topics including creating displays, outdoor learning and developing a reading for pleasure culture. The voice of the practitioner is evident throughout as teachers share their own experience, difficulties and solutions to ensure that children are inspired by their learning. Written in two parts, the first exemplifies examples of practice for each National Curriculum subject whilst the second focuses on the wider curriculum and explores issues pertinent to the primary classroom, highlighting important discussions on topics such as Reading for pleasure, Writing for pleasure, Creating a dynamic and responsive curriculum, Creating inspiring displays, Outdoor learning, Pedagogy for imagination, Relationships and Sex Education. This key text shows how even within the contested space of education, practitioners can inspire their primary learners through teaching with passion and purpose for the empowerment of the children in their class. For all new teachers, it provides advice and ideas for effective and engaging learning experiences across the curriculum.

Elliptic-Hyperbolic Partial Differential Equations Thomas H. Otway, 2015-07-08 This text is a concise introduction to the partial differential equations which change from elliptic to hyperbolic type across a smooth hypersurface of their domain. These are becoming increasingly important in diverse subfields of both applied mathematics and engineering, for example: The heating of fusion plasmas by electromagnetic waves, The behaviour of light near a caustic, Extremal surfaces in the space of special relativity, The formation of rapids, transonic and multiphase fluid flow, The dynamics of certain models for elastic structures, The shape of industrial surfaces such as windshields and airfoils, Pathologies of traffic flow, Harmonic fields in extended projective space. They also arise in models for the early universe, for cosmic acceleration and for possible violation of causality in the interiors of certain compact stars. Within the past 25 years, they have become central to the isometric embedding of Riemannian manifolds and the prescription of Gauss curvature for surfaces, topics in pure mathematics which themselves have important applications. Elliptic-Hyperbolic Partial Differential Equations is derived from a mini-course given at the ICMS Workshop on Differential Geometry and Continuum Mechanics held in Edinburgh, Scotland, in June 2013. The focus on geometry in that meeting is reflected in these notes, along with the focus on quasilinear equations. In the spirit of the ICMS workshop, this course is addressed both to applied mathematicians and to mathematically oriented engineers. The emphasis is on very recent applications and methods, the majority of which have not previously appeared in book form.

Advances in Engineering Education in the Middle East and North Africa Mahmoud Abdulwahed, Mazen O. Hasna, Jeffrey E. Froyd, 2015-11-18 This book provides a collection

of the latest advances in engineering education in the Middle East and North Africa MENA region and sheds insights for future development It is one of the first books to address the lack of comprehensive literature on undergraduate engineering curricula and stimulates intellectual and critical discourse on the next wave of engineering innovation and education in the MENA region The authors look at recent innovations through the lens of four topics learning and teaching curriculum development assessment and accreditation and challenges and sustainability They also include analyses of pedagogical innovations models for transforming engineering education and methods for using technological innovations to enhance active learning Engineering education topics on issues such as construction health and safety urban design and environmental engineering in the context of the MENA region are covered in further detail The book concludes with practical recommendations for implementations in engineering education This is an ideal book for engineering education academics engineering curriculum developers and accreditation specialists and deans and leaders in engineering education

Sewell, 2023-08-01 INFINITY IS NOT WHAT IT SEEMS

Infinity is commonly assumed to be a logical concept reliable for conducting mathematics describing the Universe and understanding the divine Most of us are educated to take for granted that there exist infinite sets of numbers that lines contain an infinite number of points that space is infinite in expanse that time has an infinite succession of events that possibilities are infinite in quantity and over half of the world s population believes in a divine Creator infinite in knowledge power and benevolence According to this treatise such assumptions are mistaken In reality to be is to be finite The implications of this assessment are profound the Universe and even God must necessarily be finite The author makes a compelling case against infinity refuting its most prominent advocates Any defense of the infinite will find it challenging to answer the arguments laid out in this book But regardless of the reader s position Forever Finite offers plenty of thought provoking material for anyone interested in the subject of infinity from the perspectives of philosophy mathematics science and theology
