Figure 1.1 shows a perfectly competitive market in equilibrium. For a short-run equilibrium, two conditions are satisfied:

It follows that the optimal demand curve corresponds to the short-run equilibrium where a value of P^D is strictly greater than the optimal price of P^S . To capture this, we define the supply process as a weakly increasing sequence of values. The P^D price equals the average cost of the significant quantity, as measured with a unit, and is lower than or equal to the market

2. In the market level, the quantity of the product supplied equals the quantity demanded. The demand curve measures the demand for market supply curve at a price of W and a quantity of 1000 shows per acre (Panel A).
3. The typical firm in the market maximizes its profit, given the market price. Given the market price of W , each of the 1000 farms maximizes profit by producing a share per acre (Panel B).
