*The 1940 Vrancea Earthquake. Issues, Insights and Lessons Learnt* Radu Vacareanu, Constantin Ionescu, 2016-03-02  
These proceedings include most of the available information on this major seismic event and its consequences. With an estimated moment magnitude of 7.7 and a heavy toll in terms of human and economic losses, it ranks as the largest intermediate depth earthquake in Europe in the twentieth century. Nevertheless, because of the difficult conditions in the 1940s, the lessons learnt after the Vrancea earthquake were not extensively shared with the international scientific community, and thus this book fills a gap in the literature discussing the knowledge acquired after major disasters. Past experience together with current understanding of the 1940 Vrancea earthquake are presented along with the latest information on Romanian seismicity, seismic hazard and risk assessment, and seismic evaluation and rehabilitation of buildings and structures. Moreover, it includes excerpts from Romanian post-disaster reports and textbooks concerning the earthquake.

**Performance-Based Seismic Engineering: Vision for an Earthquake Resilient Society** Matej Fischinger, 2014-07-15 The Bled workshops have traditionally produced reference documents providing visions for the future development of earthquake engineering as foreseen by leading researchers in the field The participants of the 2011 workshop built on the tradition of these events initiated by Professors Fajfar and Krawinkler to honor their important research contributions and have now produced a book providing answers to crucial questions in today's earthquake engineering What visible changes in the design practice have been brought about by performance based seismic engineering What are the critical needs for future advances What actions should be taken to respond to those needs The key answer is that research interests should go beyond the narrow technical aspects and that the seismic resilience of society as a whole should become an essential part of the planning and design process The book aims to provide essential guidelines for researchers professionals and students in the field of earthquake engineering It will also be of particular interest for all those working at insurance companies governmental civil protection and emergency management agencies that are responsible for assessing and planning community resilience The introductory chapter of the book is based on the keynote presentation given at the workshop by the late Professor Helmut Krawinkler As such the book includes Helmut's last and priceless address to the engineering community together with his vision and advice for the future development of performance based design earthquake engineering and seismic risk management
