Advanced Programming for the Java 2 Platform Calvin Austin, Monica Pawlan, 2000 Choice Outstanding Academic Title 2008 The uniqueness of shape as a perceptual property lies in the fact that it is both complex and structured Shapes are perceived veridically perceived as they really are in the physical world regardless of the orientation from which they are viewed The constancy of the shape percept is the sine qua non of shape perception you are not actually studying shape if constancy cannot be achieved with the stimulus you are using Shape is the only perceptual attribute of an object that allows unambiguous identification In this first book devoted exclusively to the perception of shape by humans and machines Zygmunt Pizlo describes how we perceive shapes and how to design machines that can see shapes as we do He reviews the long history of the subject allowing the reader to understand why it has taken so long to understand shape perception and offers a new theory of shape Until recently shape was treated in combination with such other perceptual properties as depth motion speed and color This resulted in apparently contradictory findings which made a coherent theoretical treatment of shape impossible Pizlo argues that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision *LDAP Programming Management and Integration* Clayton Donley, 2003 Focusing on the practical application of the Lightweight Directory Access Protocol this tutorial is geared toward IS professionals and software developers who are responsible for getting the maximum potential from their directories by integrating them with existing processes and applications As the Internet standard for directory services LDAP is accepted as a critical service and is poised to become an important means of remote information access Numerous examples demonstrate the best techniques for managing directory data in a network environment Fundamentals of LDAP design and integration with applications including messaging XML and security services are provided with examples in Java *Programming Applications for Netscape Servers* Kaveh Gh Bassiri, 1999 Programming Applications for Netscape Servers fully explains Netscape Servers and provides examples of how to program applications for them This book describes the inner workings of Netscape Servers 1 x through 3 5 1 the latest version including a review of server configuration options file settings and administration techniques You will also find a review of API fundamentals examples walk through tutorials for writing server applications and a close examination of the most appropriate programming tools for extending Netscape Servers and
