Late Applications University 2015:

Mechanical Engineering And Control Systems - Proceedings Of 2015 International Conference (Mecs2015)

Xiaolong Li, 2016-01-15 This book consists of 113 selected papers presented at the 2015 International Conference on Mechanical Engineering and Control Systems MECS2015 which was held in Wuhan China during January 23-25, 2015. All accepted papers have been subjected to strict peer review by two to four expert referees and selected based on originality, ability to test ideas and contribution to knowledge. MECS2015 focuses on eight main areas: namely Mechanical Engineering, Automation, Computer Networks, Signal Processing, Pattern Recognition, and Artificial Intelligence, Electrical Engineering, Material Engineering, and System Design. The conference provided an opportunity for researchers to exchange ideas and application experiences and to establish business or research relations, finding global partners for future collaborations. The conference program was extremely rich, profound, and featured high impact presentations of selected papers and additional late-breaking contributions.

How to Run a College Brian C. Mitchell, W. Joseph King, 2018-01-15 How can colleges stay relevant in the twenty-first century? Residential colleges are the foundation on which US higher education is based. These institutions possess storied traditions fondly cherished by students, alumni, and faculty. There is no denying, however, that all colleges today struggle with changing consumer preferences, high sticker prices, and aging infrastructure. Technological and pedagogical alternatives, not to mention growing political pressure, present complex challenges. What can colleges and smaller universities do to stay relevant in today's educational and economic climate? In their concise guide *How to Run a College*, Brian C. Mitchell and W. Joseph King analyze how colleges operate. Widely experienced as trustees, administrators, and faculty, they understand that colleges must update their practices, monetize their assets, and focus on core educational strategies in order to build strong institutions. Mitchell and King offer a frank yet optimistic vision for how colleges can change without losing their fundamental strengths. To survive and become sustainable, they must be centers of dynamic learning as well as economic engines able to power regional, state, and national economies. Rejecting the notion that American colleges are holdovers from a bygone time, *How to Run a College* shows instead that they are centers of experimentation and innovation that heavily influence higher education, not only in the United States but also worldwide.

Functional Differential Equations and Applications Alexander Domoshnitsky, Alexander Rasin, Seshadev Padhi, 2022-02-02 This book discusses delay and integro-differential equations from the point of view of the theory of functional differential equations. This book is a collection of selected papers presented at the international conference of Functional Differential Equations and Applications FDEA 2019, 7th in the series, held at Ariel University, Israel, from August 22-27, 2019. Topics covered in the book include classical properties of functional differential equations, as oscillation, non-oscillation, representation of solutions, sign properties of Green's matrices, comparison of solutions, stability, control, analysis of boundary value problems, and applications. The primary audience for this book includes specialists on ordinary partial and functional differential equations, engineers.

Case, 2018-12-13 In what ways does access to undergraduate education have a transformative impact on people and societies What conditions are required for this impact to occur What are the pathways from an undergraduate education to the public good including inclusive economic development These questions have particular resonance in the South African higher education context which is attempting to tackle the challenges of widening access and improving completion rates in a system in which the segregations of the apartheid years are still apparent Higher education is recognised in core legislation as having a distinctive and crucial role in building post apartheid society Undergraduate education is seen as central to addressing skills shortages in South Africa It is also seen to yield significant social returns including a consistent positive impact on societal institutions and the development of a range of capabilities that have public as well as private benefits This book offers comprehensive contemporary evidence that allows for a fresh engagement with these pressing issues The Application of Hydraulic and Sediment Transport Models in Fluvial Geomorphology Artur Radecki-Pawlik, Tomáš Galia, 2020-12-10 After publishing the famous *Fluvial Processes in Geomorphology* in the early 1960s the work of Luna Leopold Gordon Wolman and John Miller became a key for opening the door to understanding rivers and streams They first illustrated the problem to geomorphologists and geographers Later Chang in his *Fluvial Processes in River Engineering* provided a basis for engineers showing this group of professionals how to deal with rivers and how to understand them Since then more informative studies have been published Many of the authors started to combine fluvial geomorphology knowledge and river engineering needs such as *Tools in Fluvial Geomorphology* by G Mathias Kondolf and Herv Pi gay or focused more on river engineering tasks such as *Stream Restoration in Dynamic Fluvial Systems Scientific Approaches* by Andrew Simon Sean Bennett and Janine Castro Finally Luna Leopold summarized river and stream morphologies in the beautiful *A view of the river* It appears that we continue to explore this subject in the right direction We better understand rivers and streams and as engineers and fluvial geomorphologists we can establish tools to help bring rivers alive However there is still a hunger for more scientific tools that we could use to further understand rivers and to support the development of healthy streams and rivers with high biodiversity in the present world which has started to face water scarcity *Applications of Artificial Neural Networks II*, 1991 Applications of Artificial Neural Networks, 1991 *Harnessing Useful Rhizosphere Microorganisms for Pathogen and Pest Biocontrol* Aurelio Ciancio, Corné M.J. Pieterse, Jesús Mercado-Blanco, 2017-01-10 Growing demographic trends require sustainable technologies to improve quality and yield of future food productions However there is uncertainty about plant protection strategies in many agro ecosystems Pests diseases and weeds are overwhelmingly controlled by chemicals

which pose health risks and cause other undesirable effects Therefore an increasing concern on control measures emerged in recent years Many chemicals became questioned with regard to their sustainability and are or will be banned Alternative management tools are studied relying on biological and low impact solutions This ResearchTopic concerns microbial biocontrol agents root associated microbiomes and rhizosphere networks Understanding how they interact or respond to a biotic environmental cues is instrumental for an effective and sustainable impact The rhizosphere is in this regard a fundamental object of study because of its role in plant productivity This e book provides a polyhedral perspective on many issues in which beneficial microorganisms are involved Data indeed demonstrate that they represent an as yet poorly explored resource whose exploitation may actively sustain plant protection and crop production Given the huge number of microbial species present on the planet the microorganisms studied represent just the tip of an iceberg Data produced are however informative enough about their genetic and functional biodiversity as well as about the ecosystem services they provide to underp in crop production Challenges for future research work concern not only the biology of these species but also the practices required to protect their biodiversity and to extend their application in the wide range of agricultural soils and systems present in the world Agriculture cannot remain successfully and sustainable unless plant germplasm and useful microbial species are integrated a goal for which new knowledge and information based approaches are urgently needed
