Manual Crank Rotated Rice Transplanter:

Agricultural Robots Naoshi Kondo, Mitsuji Monta, Noboru Noguchi, 2011 The history of Japan's agriculture is characterized by efforts to increase production and productivity. At the beginning of the 21st century, both public and private sector research has focused on developing ever more sophisticated tools to address a wide range of challenges facing the agricultural industry. An amazing array of automation technologies and robots have been developed in the process to do everything from tilling fields to picking strawberries from planting rice seedlings to autonomously weeding the paddies. This richly illustrated volume surveys the results of these efforts concisely and plainly, presenting specific examples of the latest robotic mechanisms and practices for agricultural applications. *Bulletin de la Commission Internationale Du Riz*, 1994

Farmers and Consumers Market Bulletin, 2003 **Manually Operated Rice Transplanter for Sri Ganapathi**

Durairaj, Surendra Kumar, 2013 Manual transplanting operation is a tedious operation which is normally performed by women labourers in upright bending posture. It is a time consuming operation requiring about 250-300 man h/ha, accounting for about 25 per cent of total labour requirement of paddy crop. To obviate problems of labour scarcity for manual transplanting during peak seasons and for accomplishing the timelines of operation, transplanting should be done either by manual transplanter or self-propelled transplanter. In Asia, more than 60 per cent farmers have land holding size less than 2 ha. Therefore, technology for small holding size plays a very important role in developing countries, so an attempt was made to develop plug type rice transplanter for SRI. **The FMRC Rice Transplanter** Dieter Lippmann, 1989 IRRI Rice Transplanter Irri, 1980. Contem manual do operador e 11 plantas. **Self-Propelled Rice Transplanter** Ved Prakash Chaudhary, 2012-03. Rice transplanting is the biggest challenge for the rice cultivators. Transplanting of rice with mechanical transplanter will provide timeliness in operation, saving in cost of transplanting and minimizing of human drudgery. The mechanical transplanting of paddy using self-propelled transplanter is one of the options to reduce the labour requirement by 90 per cent of that required in hand transplanting. Satisfactory operation of rice transplanter requires an ideal puddled soil condition created by puddling equipment together with optimum sedimentation period. The performance of transplanter is closely related to the sinkage of float of machine which directly depends upon the degree of puddlings in various types of soils. The number of hills per meter of square depends on the seedlings density in the mat type seedling and adjustment of cutting length of fingers. A comprehensive study in respect of influence of puddled soil characteristics created by different puddlers on performance of self-propelled transplanter and impact on rice crop was conducted. This book would be useful to the professionals of rice researchers, policy makers and any one interested.
