Chemistry and Pharmacology of Naturally Occurring Bioactive Compounds Goutam Brahmachari, 2013-02-20 Natural products play crucial roles in modern drug development and constitute a prolific source of novel lead compounds or pharmacophores for ongoing drug discovery programs Chemistry and Pharmacology of Naturally Occurring Bioactive Compounds presents cutting edge research in the chemistry of bioactive natural products and demonstrates how natural product research continues to make significant contributions in the discovery and development of new medicinal entities In 21 chapters this book highlights chemistry and pharmaceutical potential of natural products in modern drug discovery processes and covers the synthesis and semi synthesis of potentially bioactive natural products Written for phytochemists synthetic chemists combinatorial chemists as well as other practitioners and students in related fields the book features chemical advances in naturally occurring organic compounds and describes their chemical transformations and structure activity relationships

Discovery and Development of Therapeutics from Natural Products Against Neglected Tropical Diseases Goutam Brahmachari, 2019-04-15 Discovery and Development of Therapeutics from Natural Products against Neglected Tropical Diseases draws together research on medicinal agents from natural sources as starting points for the design of drugs against Neglected Tropical Diseases NTDs From the prediction of promising leads and identification of active agents to the extraction of complex molecules the book explores novel economical and efficacious therapeutics for these diseases It describes current research and the role of natural products antimalarial compounds from marine natural products and sesquiterpene lactones natural antileprotic agents natural products with potential against Leishmaniasis Trypanosomiasis and Dengue and more In addition Quinoline and Isoquinoline alkaloids for developing new antiprotozoal agents are discussed alongside anti trypanosomatid heterocyclic compounds as structures for development Combining the expertise of specialists from around the world this volume aims to support and encourage researchers in the investigation of natural sources as starting points for the development of novel safe and effective agents for use against neglected tropical diseases Includes chapters written by active researchers and leading global experts deeply engaged in the research field of natural product chemistry for drug discovery Draws together cutting edge research advances in natural product chemistry that are targeted at neglected tropical diseases Highlights the future potential of natural products as sources of novel medicinal compounds against neglected tropical diseases

Natural Products James Ralph Hanson, 2003 Natural products are compounds that are produced by living systems and the secondary metabolites are those which give particular species their characteristic features These natural products include polyketides terpenoids phenylpropanoids alkaloids and antibiotics The study of these natural products has played a major part in the development of organic and medicinal chemistry and we are now starting to understand the important ecological role that these compounds have The aim of this book is to describe the major features of these compounds and the way in which chemical and physical methods have been

used to establish their structures and then to show how these structures can be rationalised in biosynthetic terms The first chapter describes the classes of natural product their biological activity and isolation Subsequent chapters attempt to link chemical and spectroscopic strategies in structure elucidation contrasting the classical chemical strategies that were used in the past with modern spectroscopic methods The final chapter describes the biosynthesis of natural products The elucidation of the structures of natural products brings together many elements taught in courses on functional group chemistry stereochemistry and elementary spectroscopy This book will therefore be welcomed by lecturers and students of second year chemistry courses Ideal for the needs of undergraduate chemistry students Tutorial Chemistry Texts is a major series consisting of short single topic or modular texts concentrating on the fundamental areas of chemistry taught in undergraduate science courses Each book provides a concise account of the basic principles underlying a given subject embodying an independent learning philosophy and including worked examples
