Journal Of Immunology Cat Allergy:

Asthma and Rhinitis William W. Busse, Stephen T. Holgate, 2008-04-30 The second edition of this highly acclaimed text has been extensively revised and greatly expanded to reflect the considerable advances made in our understanding of the mechanisms of asthma and rhinitis Containing the contributions of 242 experts of international standing presented in 133 chapters Asthma and Rhinitis provides an up to date authoritative reference for both the clinician and scientist The global approach given in this book mirrors the universal approach to the understanding of allergic disease The editors have carried out a thorough and radical revision of the content by adding 6 new sections and 44 new chapters Most of this expansion is due to greatly increased coverage of the clinical aspects of asthma with new sections on childhood asthma and on drug treatment each drug class has its own chapter Also the expansion of research into the genetic basis of asthma has necessitated a whole new section on Genetics comprising some six chapters There are also new chapters on adult onset asthma and the relationship of asthma to sinusitis A new section on Asthma in Special Circumstances includes chapters on asthma in pregnancy asthma and surgery asthma in the elderly and asthma in the context of critical care In bringing the Second Edition fully up to date the book has inevitably increased in size and is now presented in two volumes The second edition of Asthma and Rhinitis will continue the tradition of its predecessor of providing an up to the minute reference for all those involved in the management of and research into asthma and rhinitis **Journal of Allergy and Clinical**

Animal Allergens: Common Protein Characteristics Featuring their Allergenicity Christiane Hilger,Annette Kuehn,2015-07-13 Among the many molecules present in our environment some have the property to induce allergic sensitization and IgE mediated reactions The analysis of known major animal allergens has shown that most belong to single protein families lipocalins and serum albumins for inhalant allergens EF hand proteins tropomyosins and caseins for the digestive allergens The finding that allergens are often clustered in large families may be related to the fact that common structural biochemical or functional features contribute to their allergenicity in addition to external adjuvant factors Currently there is no curative treatment for animal allergy available In order to lower allergic reactions to respiratory allergens in daily life and to food allergens upon accidental exposure it is important to desensitize concerned patients Tolerance induction by allergen specific immunotherapy is in the current focus of an ambitious research This Research Topic aims to provide a comprehensive view of the basic and recent insights on the allergenicity of animal allergens in view of their structural and functional aspects as well as allergen specific immunotherapy
