

A company is tracking the number of times a post to a popular social internet site has been shared. The data is shown below

Hours, x	1	2	3	4	5	6
Shares, y	28	44	49	65	88	100

- Determine a linear regression model and an exponential regression model that best fits these data. Round all parameters to the nearest tenth.
- The correlation coefficient for both models, when rounded to the nearest hundredth is $r = 0.99$. What does this tell you about the predictive ability of these models.
- Does your linear model from part A over or under predict the number of shares at 6 hours?
- After 24 hours, the post has been shared 10,952 times. Which model does a better job extrapolating the data trend out to 24 hours? Justify.

Bodkin,Cheng Hsiao,1996 This book surveys the theories techniques model building and data collection and applications of econometrics KEY TOPICS It focuses on those aspects of econometrics that are of major importance to readers and researchers interested in performing evaluating or understanding econometric studies in a variety of areas It reviews matrix notation and the use of multivariate statistics discusses the specification of the model and the development of data for its estimation covers recent developments in econometric models techniques and applications explains the estimation of single equation models and provides case studies of the applications of econometrics to a wide array of areas including traditional areas such as the estimation of demand functions and production functions and macroeconomic models Problems of Representation in the Teaching and Learning of Mathematics Université du Québec à Montréal. Centre interdisciplinaire de recherche sur l'apprentissage et le développement en éducation,1987 As the title suggests this book presents more questions than answers Although it was prepared for those involved in research in the field of mathematics education we also had in mind our colleagues who assume responsibility for the training of teachers It is aimed at providing those concerned with basic research orientations a fund of fundamental theoretical perspectives research methodologies analyses and research results Introduction

Neuropsychobiology ,1983 **Journal of Geoscience Education** ,2000 *Cognitive and Psychometric Analysis of Analogical Problem Solving* Isaac I. Bejar,Roger Chaffin,Susan E. Embretson,1991 If one were to conduct an analysis of any profession the ability to think analogically is more than likely to be one of the requirements for success be it an architectural studio a research laboratory a legal office or a nuclear plant Cognitive scientists are aware of the prominence of analogical

reasoning in all forms of reasoning and learning and have devoted substantial effort to ascertaining its nature Test builders like cognitive scientists are aware of the centrality of analogical reasoning and figure correctly that a test that samples a student's ability to think analogically may well be a good predictor of success in a variety of fields This book is the result of a project to investigate analogical reasoning from both an individual differences and a cognitive perspective The book is directed to both researchers and practitioners concerned with the nature and measurement of analogical reasoning Cognitive scientists linguists psycholinguists and natural language researchers will find the semantic taxonomy and accompanying empirical results food for thought Test developers will find it reassuring that performance on verbal analogy items is not just a reflection of the size of a person's vocabulary and that tests can be designed according to principles rather than assembled to satisfy a set of statistical specifications Psychometricians will find that content and response modelling can go together and that there are distinct benefits in approaching psychometric response modelling from that integrative perspective
