

However, for the splitting between the gearbox and the rear axle housing, two different situations may occur:

- A)** If it's necessary to split the central housing from the gearbox, the most practical procedure is to move the rear axle rearwards, in relation to the tractor:

The fastening of the cab over the trumpets must be replaced by safety stands that keep the frame rear up.

However, all the items mentioned before must first be removed or disconnected.

- B)** If the objective is to remove only the trumpets and/or the differential down, block the back side of the cab on the central housing. Always in a safe manner!

In this case, it's necessary to remove only the lower arm of the hydraulic linkage system.

BE CAREFUL!

When lifting the rear portion of the cab or removing it from the tractor, be careful so the windshield does not hit the sheet metal or frame of the hood, which could cause the glass to break or chip.

- C)** Hot water hoses (heating)

Hoses (1) should be disconnected from the engine.

IMPORTANT:

Identify the hoses to avoid switching them later.
