**Proof Technology in Mathematics Research and Teaching** Gila Hanna, David A. Reid, Michael de Villiers, 2019-10-02  
This book presents chapters exploring the most recent developments in the role of technology in proving. The full range of topics related to this theme are explored including computer proving, digital collaboration among mathematicians, mathematics teaching in schools and universities and the use of the internet as a site of proof learning. Proving is sometimes thought to be the aspect of mathematical activity most resistant to the influence of technological change. While computational methods are well known to have a huge importance in applied mathematics, there is a perception that mathematicians seeking to derive new mathematical results are unaffected by the digital era. The reality is quite different. Digital technologies have transformed how mathematicians work together, how proof is taught in schools and universities and even the nature of proof itself. Checking billions of cases in extremely large but finite sets, impossible a few decades ago, has now become a standard method of proof. Distributed proving by teams of mathematicians working independently on sections of a problem has become very much easier as digital communication facilitates the sharing and comparison of results. Proof assistants and dynamic proof environments have influenced the verification or refutation of conjectures and ultimately how and why proof is taught in schools. And techniques from computer science for checking the validity of programs are being used to verify mathematical proofs. Chapters in this book include not only research reports and case studies but also theoretical essays, reviews of the state of the art in selected areas and historical studies. The authors are experts in the field. **IB World Schools Yearbook 2011** Wendy Bosberry-Scott, 2011. This yearbook is the official guide to schools offering the International Baccalaureate Diploma, Middle Years and Primary Years programmes. It tells you where the schools are and what they offer and provides up to date information about the IB programmes and the International Baccalaureate Organization. **IB World Schools Yearbook 2012**, 2012. Debates in Mathematics Education Gwen Ineson, Hilary Povey, 2020-06-15. This new and updated second edition of Debates in Mathematics Education explores the major issues that mathematics teachers encounter in their daily lives. By engaging with established and contemporary debates, this volume promotes and supports critical reflection and aims to stimulate both novice and experienced teachers to reach informed judgements and argue their point of view with deeper theoretical knowledge and understanding. Divided into five accessible sections, this book investigates and offers fresh insight into topics of central importance in mathematics education. With this second edition, including new discussions and chapters on Classic and contemporary issues of pedagogy, politics, philosophy and sociology of mathematics education, International comparisons of achievement, Digital technologies for teaching, Mastery in mathematics, Pop culture and mathematics, Whether mathematics can be harmful. Designed to stimulate discussion and support you in your own research, writing and practice through suggested questions and activities throughout, Debates in Mathematics Education will be a valuable resource for any student or practising teacher and those engaged in initial teacher education continuing.

require a focused treatment that respects the child's intelligent behaviour. A positive view of misconceptions suggests respectful language like alternative frameworks for children's thinking and concept formation. The most important consideration is to provide children with the conditions including time to articulate their reasoning, confront alternatives and make a rational decision to change their mind or not. This book makes use of recent and extensive original data from the authors' own researches on children's performance errors and misconceptions across the mathematics curriculum including standardised data from a large national sample of 4 to 15 year olds and conversations involving children in argumentation and work with teachers implementing change in their classrooms. The cycle of research includes use of written diagnostic test items, children's reasoning as captured in group argumentation, details of the types of reasoning that help children to change their mind and the development of tools for classroom teaching by practising teachers. The discussion of research is anchored in practical learning and teaching contexts in order to directly relate to mathematics teaching practice and teachers' expertise. The book progressively develops concepts for teachers to use in organising their understanding and knowledge of children's mathematics, concluding with an introduction to theoretical accounts of learning and teaching that can help make practical sense. The book bridges the gap between research in the psychology of learning mathematics and the reality of classroom practice. The book is ground breaking in that it transforms research on diagnostic errors, argumentation and teaching strategies into knowledge for teaching. The voices in the research include those of children and teachers in classrooms as well as the academic and research communities.
