Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019. The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures. The many topics featured in these Proceedings can be classified into six broad categories that deal with:

- i the mechanics of materials and fluids: elasticity, plasticity, flow through porous media, fluid dynamics, fracture, fatigue, damage, delamination, corrosion, bond, creep, shrinkage, etc.
- ii the mechanics of structures and systems: structural dynamics, vibration, seismic response, soil structure interaction, fluid structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse, behaviour.
- iii the numerical modelling and experimental testing of materials and structures: numerical methods, simulation techniques, multi scale modelling, computational modelling, laboratory testing, field testing, experimental measurements.
- iv innovations and special structures: nanostructures, adaptive structures, smart structures, composite structures, bio inspired structures, shell structures, membranes, space structures, lightweight structures, long span structures, tall buildings, wind turbines, etc.
- v design in traditional engineering materials: steel, concrete, steel concrete composite, aluminium, masonry, timber, glass.
- vi the process of structural engineering: conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, testing, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning.

The SEMC 2019 Proceedings will be of interest to civil, structural, mechanical, marine and aerospace engineers, Researchers, developers, practitioners and academics in these disciplines will find them useful. Two versions of the papers are available: Short versions intended to be concise but self contained summaries of the full papers are in this printed book. The full versions of the papers are in the e book      *Finite Element Analysis and Design of Steel and Steel-Concrete Composite Bridges* Ehab Ellobody, 2014-05-30.

In recent years bridge engineers and researchers are increasingly turning to the finite element method for the design of Steel and Steel Concrete Composite Bridges. However the complexity of the method has made the transition slow. Based on twenty years of experience *Finite Element Analysis and Design of Steel and Steel Concrete Composite Bridges* provides structural engineers and researchers with detailed modeling techniques for creating robust design models. The book's seven chapters begin with an overview of the various forms of modern steel and steel concrete composite bridges as well as current design codes. This is followed by self contained chapters concerning nonlinear material behavior of the bridge components, applied loads and stability of steel and steel concrete composite bridges and design of steel and steel concrete composite bridge components. Constitutive models for construction materials including material non linearity and geometric non linearity. The mechanical approach including problem setup
