today become time machines that take us on a vivid journey through four billion years of life's history. We meet long lost ancestors picturing them in the environment of a much younger earth and discover where we first acquired our backbones and nipples and conversely where we lost our tails. We learn how insects are actually crustaceans and how dogs and wolves are more closely related to whales than to the recently extinct Tasmanian wolves they so resemble. Far from a dry representation of the dead, the tree of life is a living shifting thing that constantly alters our perspective on the past, present and future of life on earth. For any reader fascinated by evolution and natural history, *The Tree of Life* is an essential portal to the distant past and a window onto our collective origins.

Human-Animal Relations in Bronze Age Crete, Andrew Shapland, 2022-05-12. Archaeologists have long admired the naturalistic animal art of Minoan Crete, often explaining it in terms of religion or a love of the natural world. In this book, Andrew Shapland provides a new way of understanding animal depictions from Bronze Age Crete as the outcome of human-animal relations. Drawing on approaches from anthropology and Human Animal Studies, he explores the stylistic development of animal depictions in different media, including frescoes, ceramics, stone vessels, seals and wall paintings, and explains them in terms of animal practices such as bull-leaping, hunting, fishing and collecting. Integrating zooarchaeological finds, Shapland highlights the significance of objects and their associated human-animal relations in the history of the palaces, sanctuaries and tombs of Bronze Age Crete. His volume demonstrates how looking at animals opens up new perspectives on familiar sites such as Knossos and some of the most famous objects of this time and place.
