

**CHAPTER 1: DATABASES AND DATABASE USERS****Answers to Selected Exercises**

**1.8** - Identify some informal queries and update operations that you would expect to apply to the database shown in Figure 1.2.

**Answer:**

(a) (Query) List the names of all students majoring in Computer Science.

(b) (Query) What are the prerequisites of the Database course?

(c) (Query) Retrieve the transcript of Smith. This is a list of <CourseName, SectionIdentifier, Semester, Year, Grade> for each course section that Smith has completed.

(d) (Update) Insert a new student in the database whose Name=Jackson, StudentNumber=23, Class=1 (freshman), and Major=MATH.

(e) (Update) Change the grade that Smith received in Intro to Computer Science section 119 to B.

**1.9** - What is the difference between controlled and uncontrolled redundancy?

**Answer:**

Redundancy is when the same fact is stored multiple times in several places in a database. For example, in Figure 1.5(a) the fact that the name of the student with StudentNumber=8 is Brown is stored multiple times. Redundancy is controlled when the DBMS ensures that multiple copies of the same data are consistent; for example, if a new record with StudentNumber=8 is stored in the database of Figure 1.5(a), the DBMS will ensure that StudentName=Smith in that record. If the DBMS has no control over this, we have uncontrolled redundancy.

**1.10** - Specify all the relationships among the records of the database shown in Figure 1.2.

**Answer:**

(a) Each SECTION record is related to a COURSE record.

(b) Each GRADE\_REPORT record is related to one STUDENT record and one SECTION record.

(c) Each PREREQUISITE record relates two COURSE records: one in the role of a course and the other in the role of a prerequisite to that course.

**1.11** - Give some additional views that may be needed by other user groups for the database shown in Figure 1.2.
