

ORACLE DR SWITCHOVER, MANUALLY

An oracle database can be in one of two mutually exclusive modes (primary or standby). These roles can be altered at runtime without loss of data or resetting of redo logs. This process is known as a Switchover.

A graceful switchover is a planned role reversal between the primary and the standby databases. This is used when there is a planned outage on the primary database. The switchover allows you to switch the roles of the databases so that, the primary database transitions to a standby role, and the standby database transitions to the primary role. The standby databases which now transitions to become a "new" primary database and will serve applications and user's request. A switchover guarantees no data loss and the switchover operation happens on both the primary and standby database.

In this Document I will demonstrate how to perform the DR SWITCHOVER manually.
