needed to save the scientific framework of economics. In spite of the conceptual inconsistencies, GDP continues to be accepted by the nation states as the singular parameter to comprehensively describe the health of their economy. What gets easily hidden behind Market Failures is actually the success of cost shifting on the heads of the ignorant and marginalized people as price for economic growth. The chapters eloquently establish the need for moving beyond the religious faith on a paradigm that is facing fundamental conceptual challenges but has not addressed them with due seriousness. What is a greater contribution of this collection is the identification of the gaps in knowledge of economics that need to be filled up to arrive at some basic articulations of the new paradigm that can throw some light on what is ecologically and socially Sustainable Development.

Jayanta Bandyopadhyay, Past President, The Indian Society for Ecological Economics

The title *Beyond Uneconomic Growth* captures both the core of Herman Daly's key message and the linguistic mastery that makes his texts so enjoyable to read. The book forms a great tribute to the work of Herman Daly by gathering a distinguished set of contributors covering a wide variety of the topics that Daly has dealt with and pointing in new directions.

Inge Røpke, Aalborg University, Denmark

This engaging book brings together leading ecological economists to collectively present a definitive case for looking beyond economic growth as the sole panacea for the world's ecological predicament. Grounded in physics, ecology, and the science of human behavior, contributors show how economic growth itself has become uneconomic and adds to a ravaging of both social and ecological cohesion. Guided by a clear moral vision that prioritizes sustainability and justice over profit, the authors provide a blueprint for an economy that replaces quantitative growth with qualitative improvement to enhance human welfare while restoring degraded ecosystems. They present solutions for many of today's challenges ranging from global climate change and biodiversity loss to natural resource depletion. This interdisciplinary work not only relates ecological economics theory to the most urgent predicaments of the contemporary world but also pays tribute to the work of Herman Daly, a leading pioneer of modern ecological economics.

Researchers and faculty studying and teaching ecological economics and environmental studies will find value in this unprecedented book. It will also be of interest to practitioners working to solve a variety of global environmental issues.
